Le titre du tableau B décrivant la méthode II doit se lire comme suit: Assignment de la première langue officielle parlée aux personnes ne pouvant tenir une conversation ni en anglais ni en français.

Page 1-1:

A la cinquième colonne du tableau 1, quelques lettres n'ont pas été imprimées. L'intitulé de la colonne doit se lire comme suit:

Neither  
English nor  
French

Ni anglais  
ni français

Page 1-8:

A la ligne correspondant à CAPE ST. GEORGE AND OTHERS, au lieu du signe \*\*\*, insérer les pourcentages 15.3 et 13.3 après respectivement les nombres 235 et 205.

Pages 1-45 à 1-47:

Certaines pages ont été inversées. La page 1-45 correspond à la page 1-46, 1-46 à 1-47 et 1-47 à 1-45.

Pages 1-58 et 1-59:

Le mot MONCOUCHE doit être biffé à la page 1-59 et ajouté au bas de la page 1-58 après MONTMORENCY NO.1, PTE.

## **GUIDELINES FOR USING THIS PUBLICATION**

### **PURPOSE**

This publication presents two series of population estimates by first official language spoken. The data are not derived from a question asked directly of respondents, but rather from the responses of a 20% sample of the non-institutional population to the three linguistic questions in the census.

The census provides a number of linguistic statistics concerning an attribute acquired during childhood (mother tongue), current behaviour (language usually spoken at home), or capacity for expression (knowledge of the official languages). Each of these variables describes a particular facet of the demolingistic reality. When considered in pairs, they highlight, on the one hand, linguistic transfers (mother tongue and home language) and, on the other, bilingualism by linguistic group (mother tongue or home language and knowledge of the official languages).

Whether for the purpose of providing a more detailed description of the demolingistic situation, drawing up a more complete profile of Anglophone and Francophone communities or evaluating the demand for services in each official language, some users would also like to obtain estimates of the respective size of the English- and French-speaking population in Canada. Depending on the assumptions used and the order in which the three linguistic variables of the census are taken into account, a number of values may be obtained. The data yielded by two different estimation methods are presented.

### **ORGANIZATION OF THE PUBLICATION**

This publication contains two tables illustrating the distribution of the population by first official

## **LIGNES DIRECTRICES POUR L'UTILISATION DE CETTE PUBLICATION**

### **OBJET**

Cette publication présente deux séries d'estimations de la population selon la première langue officielle parlée. Les données ne proviennent pas d'une question posée directement aux individus recensés; elles dérivent des réponses fournies aux trois questions linguistiques du recensement par un échantillon de 20% de la population vivant à l'extérieur des institutions.

Le recensement propose d'emblée de nombreuses statistiques linguistiques. Celle-ci concernent soit un attribut assigné durant l'enfance (la langue maternelle), soit un comportement actuel (la langue parlée habituellement à la maison), soit une capacité d'expression (la connaissance des langues officielles). Chacune de ces variables décrit une facette particulière de la réalité démolingistique. Prises deux à deux, elles mettent en évidence d'une part les transferts linguistiques (langue maternelle et langue parlée à la maison) et d'autre part le bilinguisme selon le groupe linguistique (langue maternelle ou langue parlée à la maison et connaissance des langues officielles).

Pour enrichir la description de la situation démolingistique, pour compléter le profil des collectivités anglophones et francophones ou pour évaluer la demande de services dans chacune des langues officielles, certains utilisateurs souhaitent aussi obtenir une estimation du nombre de Canadiens d'expression anglaise et de l'effectif des Canadiens d'expression française. Plusieurs valeurs peuvent être obtenues selon les hypothèses faites et selon l'ordre dans lequel les trois variables linguistiques du recensement sont prises en compte. Les données qui résultent de la mise en oeuvre de deux méthodes d'estimation sont présentées.

### **ORGANISATION DE LA PUBLICATION**

La publication contient deux tableaux. Ils présentent la répartition de la population selon la

language spoken. The first table shows the distribution of this derived variable for Canada, the provinces and territories and for census divisions and subdivisions, while the second table covers census metropolitan areas.

Each table provides two series of population estimates by first official language spoken. The population in the "Both English and French" and "Neither English nor French" categories is identical in both series. Furthermore, when allowance is made for random rounding, the total population in the "English" and "French" categories is the same in both series.

The following section describes the estimation methods. The rest of the introductory text presents the most important terms and provides general information on the census. More detailed information can be found in the reference material following the tables.

## ESTIMATION METHODS

"First official language spoken" is not a simple characteristic. It has two main categories, English and French, Canada's two official languages. Addition of the epithet "spoken" refers to the ability to carry on a conversation in the language in question. The adjective "first" has two quite distinct meanings. In its initial sense, it designates the first language learned or spoken in childhood (mother tongue); however, its main meaning is that of language now best known or most frequently used (particularly at home). This distinction forms the basis for two estimation methods, the first (I) of which accords priority to mother tongue over home language, while the second (II) reverses the roles of these variables.

Since ability to speak the language is the criterion for determining the first official language, those who indicated on the question concerning knowledge of the official languages that they could carry on a conversation in English only or French only were assigned to the corresponding group. The first official language of persons able to speak both English and French was then determined on the basis of the responses to the questions on mother tongue and home language. The same procedure was used to resolve the cases of persons

première langue officielle parlée. Dans le premier tableau, la distribution de cette variable dérivée est donnée pour le Canada, les provinces et territoires ainsi que pour les divisions et subdivisions de recensement. Le second tableau est consacré aux différentes régions métropolitaines de recensement.

Chaque tableau offre deux séries d'estimations de la population selon la première langue officielle parlée. Les effectifs des catégories "Anglais et français" et "Ni l'anglais ni le français" ne varient pas d'une série à l'autre. Par suite, à l'arrondissement aléatoire près, la somme des effectifs des catégories "Anglais" et "Français" est identique dans chaque série.

La section suivante décrit les méthodes d'estimation retenues. Les autres sections du texte liminaire présentent les principaux termes utilisés ainsi que des informations générales sur le recensement. Des renseignements plus détaillés sont donnés dans les documents de référence qui suivent les tableaux.

## MÉTHODES D'ESTIMATION

La première langue officielle parlée a deux modalités principales, l'anglais et le français, les langues officielles du pays. L'épithète "parlée" indique qu'une personne doit pouvoir soutenir une conversation dans la langue assignée. Quant au qualificatif "première", il revêt deux significations fort différentes. Au sens d'initial, il correspond à la langue apprise ou parlée en premier lieu dans la petite enfance (la langue maternelle); il désigne plutôt, au sens de principal, la langue la mieux connue actuellement ou le plus souvent utilisée (notamment à la maison). Cette distinction est à l'origine de la mise en oeuvre de deux méthodes d'estimation, l'une (I) qui accorde priorité à la langue maternelle sur la langue parlée à la maison, l'autre (II) qui inverse le rôle des variables.

Comme la première langue officielle doit pouvoir être parlée, l'anglais ou le français est assigné respectivement à ceux qui, d'après l'indication fournie à la question sur la connaissance des langues officielles, peuvent soutenir une conversation en anglais seulement ou en français seulement. Les réponses aux questions relatives à la langue maternelle et à la langue parlée à la maison sont ensuite utilisées pour établir la première langue officielle des personnes qui peuvent parler l'anglais et le français. Les mêmes

who have indicated they could speak neither English nor French.

The two text tables indicate the category assigned in various possible situations. To make allowance for unresolved cases, it was necessary to add two residual categories: 1 Both English and French and 2 Neither English nor French. Since these categories reflect the same situations in both Method I and Method II, they are shown only once in the statistical tables.

According to the census, 291,000 persons in Canada could speak neither English nor French. However, almost 10% of these persons could be assigned to to other categories of first official language spoken on the basis of responses to the questions on mother tongue and home language. Consequently, the "Neither English nor French" category in Table 1 includes only 263,000 persons, or 1.1% of the population.

On the basis of the available information, it was impossible to decide between English and French in 297,000 cases, or 1.2% of the population. There were three simple options: 1 create a separate category, 2 add the total to both the English and French categories, in effect counting it twice, and 3 distribute these cases equally between English and French. A special category was created to enable the user to make his/her own choice. Due to lack of space, only the third solution is shown in the final columns of the table: the size and proportion of the minority official language population according to both estimation methods.

procédés sont employés pour résoudre le cas des personnes qui ont indiqué ne pouvoir parler ni l'anglais ni le français.

Les deux tableaux explicatifs indiquent la modalité assignée dans les différentes situations possibles. Pour tenir compte des cas non résolus, il a fallu ajouter deux modalités résiduelles: 1<sup>o</sup> Anglais et Français et 2<sup>o</sup> Ni l'anglais ni le français. Elles correspondent aux mêmes situations dans les méthodes I et II. Ces catégories ne figurent donc qu'une fois dans les tableaux statistiques.

D'après le recensement, 291,000 personnes ne peuvent parler ni l'anglais ni le français dans l'ensemble du pays. Près de 10 % d'entre elles ont pu être assignées aux autres modalités de la première langue officielle parlée par les réponses données aux questions relatives à la langue maternelle et à la langue parlée à la maison. Finalement, la catégorie "Ni l'anglais ni le français" ne rassemble que 263,000 personnes au tableau 1, soit 1.1% de la population.

Les renseignements disponibles ne permettent pas de trancher entre l'anglais et le français dans 297,000 cas, soit 1.2% de la population. Trois solutions simples peuvent être adoptées: 1<sup>o</sup> faire de ces cas une catégorie distincte, 2<sup>o</sup> les ajouter en entier à l'anglais et aussi au français, ce qui revient à les compter deux fois, et 3<sup>o</sup> les répartir en parts égales entre l'anglais et le français. Une modalité particulière a été créée pour permettre à l'utilisateur de faire son choix. De plus, dans les dernières colonnes du tableau, faute d'espace, seule la troisième solution a été retenue pour présenter l'effectif et la proportion de la langue officielle minoritaire d'après les deux méthodes d'estimation.

## METHOD I

### A) Assignment of first official language spoken to persons able to carry on a conversation in both English and French.

| Mother tongue  |   |   | Home language  |     | E&O | F&O | E,F&O |
|----------------|---|---|----------------|-----|-----|-----|-------|
|                | E | F | O <sup>1</sup> | E&F |     |     |       |

| E,F&O          | E | F | E&F            | E&F | E   | F   | E&F   |

E = English, F = French, O = Non-official languages.

### B) Assignment of first official language spoken to persons unable to carry on a conversation in either English or French.

| Mother tongue  |   |   | Home language  |     | E&O | F&O | E,F&O |
|----------------|---|---|----------------|-----|-----|-----|-------|
|                | E | F | O <sup>1</sup> | E&F |     |     |       |
| E              | E | E | E              | E   | E   | E   | E     |
| F              | F | F | F              | F   | F   | F   | F     |
| O <sup>1</sup> | E | F | Neither        | E&F | E   | F   | E&F   |
| E&F            | E | F | E&F            | E&F | E   | F   | E&F   |
| E&O            | E | E | E              | E   | E   | E   | E     |
| F&O            | F | F | F              | F   | F   | F   | F     |
| E,F&O          | E | F | E&F            | E&F | E   | F   | E&F   |

E = English, F = French, O = Non-official languages.

<sup>1</sup> Including multiple responses in which neither English nor French were mentioned.

## METHOD II

### A) Assignment of first official language spoken to persons able to carry on a conversation in both English and French.

| Mother tongue  |   |   | Home language  |     | E&O | F&O | E,F&O |
|----------------|---|---|----------------|-----|-----|-----|-------|
|                | E | F | O <sup>1</sup> | E&F |     |     |       |
| E              | E | F | E              | E   | E   | F   | E     |
| F              | E | F | F              | F   | E   | F   | F     |
| O <sup>1</sup> | E | F | E&F            | E&F | E   | F   | E&F   |
| E&F            | E | F | E&F            | E&F | E   | F   | E&F   |
| E&O            | E | F | E              | E   | E   | F   | E     |
| F&O            | E | F | F              | F   | E   | F   | F     |
| E,F&O          | E | F | E&F            | E&F | E   | F   | E&F   |

E = English, F = French, O = Non-official languages

### B) Assignment of first official language spoken to persons unable to carry on a conversation in either English or French.

| Mother tongue  |   |   | Home language  |     | E&O | F&O | E,F&O |
|----------------|---|---|----------------|-----|-----|-----|-------|
|                | E | F | O <sup>1</sup> | E&F |     |     |       |
| E              | E | F | E              | E   | E   | F   | E     |
| F              | E | F | F              | F   | E   | F   | F     |
| O <sup>1</sup> | E | F | Neither        | E&F | E   | F   | E&F   |
| E&F            | E | F | E&F            | E&F | E   | F   | E&F   |
| E&O            | E | F | E              | E   | E   | F   | E     |
| F&O            | E | F | F              | F   | E   | F   | F     |
| E,F&O          | E | F | E&F            | E&F | E   | F   | E&F   |

E = English, F = French, O = Non-official languages.

<sup>1</sup> Including multiple responses in which neither English nor French were mentioned.

## MÉTHODE I

### A) Assignment de la première langue officielle parlée aux personnes pouvant tenir une conversation en anglais et en français

| Langue maternelle | Langue parlée à la maison |   |                |     |     |     |       |

A = Anglais, F = Français, O = Langues non officielles

<sup>1</sup> Y compris les réponses multiples n'incluant ni l'anglais ni le français.

## GEOGRAPHIC AND CONTENT CONSIDERATIONS

**Census divisions and census subdivisions:** Census division is the general term applying to counties, regional municipalities, regional districts, etc., whereas census subdivision is the general term applying to municipalities, Indian reserves, Indian settlements and unorganized territories.

**Census metropolitan areas:** Census metropolitan areas (CMAs) are generally defined as large urbanized cores, together with adjacent urban and rural areas which have a high degree of economic and social integration with the core.

**Count discrepancies between 100% data and 20% sample data:** Counts of the population, households, dwellings or families shown in tabulations based on a 20% sample may differ from those collected on a 100% basis for the following reasons:

- (1) **The exclusion of institutional residents:** Institutional residents are defined as those individuals other than staff members and their families who live in institutional collective dwellings such as homes for the elderly, hospitals and correctional institutions. Detailed sample data were not collected from this sector of the population.
- (2) **Weighting:** Data collected on a sample basis were weighted up to provide estimates of the non institutional population. However, weighted counts are subject to sampling variability. This means, for any given area, the weighted count may differ from that shown in tabulations containing data collected on a 100% basis. While the differences are relatively small for geographic areas with large populations, they can be greater for areas with small populations. For further information on this topic, please contact Social Survey Methods Division at Statistics Canada, Ottawa, Canada K1A 0T6 (613) 951-6929.

## FACTEURS DE GÉOGRAPHIE ET DE CONTENU

**Divisions de recensement et subdivisions de recensement:** La division de recensement est le terme général employé pour désigner les comtés, les municipalités régionales, les districts régionaux, etc., tandis que la subdivision de recensement est le terme général qui représente les municipalités, les réserves indiennes, les établissements indiens et les territoires non organisés.

**Régions métropolitaines de recensement:** Les régions métropolitaines de recensement (RMR) sont généralement définies comme étant de grands noyaux urbanisés, auxquels s'ajoutent des régions urbaines et rurales adjacentes ayant un degré élevé d'intégration économique et sociale avec le noyau.

**Divergences des chiffres entre les données intégrales et les données-échantillon (20%):** Les chiffres de la population, des ménages, des logements ou des familles des tableaux utilisant les données-échantillon (20%) peuvent différer des données intégrales pour les raisons suivantes:

- (1) **L'exclusion des pensionnaires d'institution:** Ces derniers sont définis comme les personnes autres que les membres du personnel et de leurs familles qui vivent dans les logements collectifs tels que les foyers pour personnes âgées, les hôpitaux et les établissements de correction. On n'a pas recueilli de données-échantillon détaillées pour ce segment de la population.
- (2) **Pondération:** Les données-échantillon sont pondérées afin d'obtenir des estimations de la population hors institution. Cependant, les chiffres pondérés se caractérisent par de la variabilité d'échantillonnage, ce qui signifie que pour toute région donnée, le chiffre pondéré peut différer de celui qui figure dans les tableaux contenant les données intégrales. Bien que les différences soient relativement faibles pour les régions géographiques ayant de fortes populations, elles peuvent être plus importantes dans le cas des régions avec de petites populations. Pour plus de renseignements sur ce sujet, veuillez communiquer avec la Division des méthodes d'enquêtes sociales de Statistique Canada, Ottawa, Canada K1A 0T6 (613) 951-6929.

**Incompletely enumerated Indian reserves and Indian settlements:** On some Indian reserves and Indian settlements, 1986 Census enumeration was not permitted or was interrupted. Therefore, data are not available for these reserves and the tables have been noted accordingly. This issue is discussed more fully in the SPECIAL NOTES section.

Additional information on geographic and content considerations, definitions of terms, explanations of data quality, etc., may be found at the end of this publication immediately following the tables.

**Réserves indiennes et établissements indiens partiellement dénombrés:** Dans certaines réserves indiennes et établissements indiens, les recenseurs n'ont pas eu la permission d'effectuer le dénombrement en 1986 ou ont dû l'interrompre. Les données ne sont donc pas disponibles pour ces réserves et des notes apparaissent selon le besoin. Pour des précisions à ce sujet, voir la section NOTES SPÉCIALES.

Vous trouverez d'autres renseignements complémentaires sur les facteurs de géographie et de contenu, la définition détaillée des termes, des précisions sur la qualité des données, etc., à la fin de la publication, immédiatement après les tableaux.

## 1986 CENSUS PRODUCTS AND SERVICES

The 1986 Census product line is designed to serve the diverse needs of our users. Using as a base the most demanded publications of past censuses, a full series of data, reference and analytical publications have been offered.

In addition to the tabulations shown in publications, census data are available in machine-readable form. In particular, there is a set of 44 basic summary tabulations for small geographic areas including enumeration areas, census tracts and census subdivisions. The data contained in the published profiles for census subdivisions and census divisions, census tracts, federal electoral districts, census metropolitan areas and census agglomerations are also available in machine-readable form.

While many tabulations are available from the planned output program, census tabulations can also be customized to individual users' needs. A range of products is offered, from predetermined basic data tabulations available for user-selected geographic areas, to complete custom tabulations which are developed to the exact requirements of the client. The products thus offer, on a cost-recovery basis, varying levels of flexibility in content, geography and medium.

### REFERENCE PRODUCTS

Users, who may require assistance in understanding and interpreting the data and geographic concepts appearing in this set of tabulations, should refer to the **1986 Census Dictionary** (Catalogue No. 99-101E or F). The **Dictionary** provides a range of definitions for all variables and terms used in 1986 Census data products.

Maps showing the names, boundaries and location of geographic areas appearing in this set of tabulations are shown in the **Reference Map** publication (Catalogue No. 99-115).

## PRODUITS ET SERVICES DU RECENSEMENT DE 1986

La gamme des produits du recensement de 1986 doit répondre aux besoins variés de nos utilisateurs. En fonction des publications les plus populaires des derniers recensements, nous avons offert une série complète de données, de documents de référence et d'ouvrages analytiques.

En plus des totalisations présentées dans les publications, les données du recensement sont disponibles sous forme lisible par machine. Notamment, une série de 44 totalisations sommaires de base existe pour les petites régions géographiques comprenant les secteurs de dénombrement, les secteurs de recensement et les subdivisions de recensement. Les données contenues dans les profils publiés pour les subdivisions de recensement et les divisions de recensement, les secteurs de recensement, les circonscriptions électorales fédérales, les régions métropolitaines de recensement et les agglomérations de recensement sont également disponibles sous forme lisible par machine.

Même si plusieurs totalisations sont disponibles à partir du programme des produits déjà établi, des totalisations du recensement peuvent également être personnalisées selon les besoins de l'utilisateur. Il est possible de se procurer une gamme de produits allant des totalisations de données fondamentales, déterminées à l'avance, disponibles pour les régions géographiques choisies par l'utilisateur, à des totalisations entièrement personnalisées et préparées selon les exigences précises du client. Ainsi, ces produits permettent d'offrir, contre recouvrement des coûts, différents niveaux de souplesse en matière de contenu, de géographie et de support.

### PRODUITS DE RÉFÉRENCE

Les utilisateurs qui ont besoin d'aide pour comprendre et interpréter les données et les concepts géographiques figurant dans cette série de totalisations peuvent consulter le **Dictionnaire du recensement de 1986** (n° 99-101F ou E au catalogue). Le **dictionnaire** donne les définitions de toutes les variables et de tous les termes utilisés dans les produits du recensement de 1986.

Les cartes sur lesquelles sont indiqués le nom, les limites et l'emplacement des régions géographiques mentionnées dans cette série de totalisations sont comprises dans la publication intitulée **Carte de référence** (n° 99-115 au catalogue).

Users can obtain detailed descriptions of intercensal changes to census subdivisions from **Changes to Municipal Boundaries, Status and Names** (Catalogue No. 12-201, annual) and **Standard Geographical Classification, 1986**, Volume III (Catalogue No. 12-573, occasional). The former provides annual summaries of changes while the latter contains a five-year intercensal summary.

Two additional documents available to assist users with geography related changes are:

1. **1986 Census Geography: A Historical Comparison** (Catalogue No. 99-106E and F). This publication is designed to aid users in the comprehension of standard geographic terms. It also compares geographic terms associated with the 1986 Census to those of previous censuses.
2. **Census Metropolitan Areas and Census Agglomerations: A 1986 and 1981 Comparison** (Catalogue No. 99-105E and F). This publication provides comparisons of 1986 census metropolitan areas (CMAs) and census agglomerations (CAs) and their 1981 versions. The publication lists census subdivisions that make up the 1986 version of each CMA and CA, and shows corresponding delineations for 1981.

Further details on the products and services available from the census are provided in the **1986 Census Products and Services - Final Edition** (Catalogue No. 99-103E or F).

All users wishing to obtain more information about the range of census products available to serve their needs are invited to contact their nearest Statistics Canada Regional Office. A representative will be glad to help. Addresses and phone numbers are listed on the second last page.

Les utilisateurs peuvent obtenir des descriptions détaillées sur les changements intercensitaires apportés aux subdivisions de recensement dans les publications intitulées **Changements de limites, de statut et de nom des municipalités** (n° 12-201 au catalogue, annuel) et **Classification géographique type, 1986**, volume III (n° 12-573 au catalogue, hors série). La première présente des résumés annuels des changements, tandis que la deuxième offre un résumé intercensitaire sur cinq ans.

Deux publications supplémentaires sont disponibles afin d'aider les utilisateurs à comprendre les modifications apportées au secteur de la géographie:

1. **Géographie du recensement de 1986: Comparaison historique** (n° 99-106F et E au catalogue). Cette publication est destinée à aider les utilisateurs à comprendre les termes géographiques normalisés. Elle permet également la comparaison entre les termes géographiques associés au recensement de 1986 et ceux des recensements précédents.
2. **Régions métropolitaines de recensement et agglomérations de recensement: Comparaison entre 1986 et 1981** (n° 99-105F et E au catalogue). Cette publication facilite la comparaison entre, d'une part, les régions métropolitaines de recensement (RMR) et les agglomérations de recensement (AR) de 1986 et, d'autre part, celles de 1981. La publication donne une liste des subdivisions de recensement de chaque RMR et AR de 1986 et montre la délimitation correspondante de 1981.

D'autres détails sur les produits et services du recensement sont fournis dans les **Produits et services du recensement de 1986 - Version définitive** (n° 99-103F ou E au catalogue).

Les utilisateurs qui désirent obtenir plus de précisions sur la gamme des produits du recensement adaptés à leurs besoins sont invités à communiquer avec le bureau régional de Statistique Canada le plus près. Un représentant sera heureux de vous aider. Les adresses et les numéros de téléphone sont donnés à la dernière page.

## OTHER LANGUAGE DATA PRODUCTS

There are several other products from the 1986 Census which contain **language** data. These include:

### NATION SERIES

- **Language: Part 1** (Catalogue No. 93-102)

Mother tongue data are shown in this publication. It also includes selected figures from the 1981 Census.

- **Language: Part 2** (Catalogue No. 93-103)

Mother tongue, home language and official language data are shown in this publication. It also includes selected figures from the 1981 Census.

- **Income** (Catalogue Nos. 93-114 and 93-115)

Catalogue No. 93-114, provides information on the total income of individuals cross-tabulated by mother tongue, while Catalogue No. 93-115, shows employment income by mother tongue and official language.

### DIMENSION SERIES

- **Language Retention and Transfer** (Catalogue No. 93-153)

The following variables are cross-classified: ethnic origin, mother tongue, language spoken at home, official language, age groups and sex. Selected 1981 data are also included. Data for Canada, the provinces and the territories are provided, as well as data for the census metropolitan areas of Montréal and Ottawa-Hull.

## AUTRES PRODUITS DE DONNÉES LINGUISTIQUES

Il existe plusieurs autres produits du recensement de 1986 qui contiennent des données **linguistiques**. Ils sont:

### SÉRIE: LE PAYS

- **Langue: Partie 1** (n° 93-102 au catalogue)

Cette publication renferme des données sur la langue maternelle. Elle comprend également certains chiffres du recensement de 1981

- **Langue: Partie 2** (n° 93-103 au catalogue)

Cette publication renferme des données sur la langue maternelle, la langue parlée à la maison et la langue officielle. Elle comprend également certains chiffres du recensement de 1981.

- **Revenu** (nos 93-114 et 93-115 au catalogue)

La publication n° 93-114 donne des renseignements sur le revenu total des particuliers recoupés selon la langue maternelle tandis que la publication n° 93-115 donne le revenu d'emploi selon la langue maternelle et la langue officielle.

### SÉRIE: DIMENSIONS

- **Rétention et transfert linguistiques** (n° 93-153 au catalogue)

Les variables suivantes sont recoupées: origine ethnique, langue maternelle, langue parlée à la maison, langue officielle, groupe d'âge et sexe. Certaines données du recensement de 1981 sont également présentées. Les données sont fournies pour le Canada, les provinces et les territoires ainsi que pour les régions métropolitaines de recensement de Montréal et d'Ottawa-Hull

- **Profile of Ethnic Groups** (Catalogue No. 93-154)

For selected ethnic groups, data are shown by demographic, social and economic characteristics such as age, marital status, mother tongue, home language, official language, education and income. The level of geography is Canada only.

- **Profile of the Immigrant Population** (Catalogue No. 93-155)

Data on various aspects of the immigrant population are provided. Language characteristics are shown - mother tongue, home language, official language - as well as other variables such as age, marital status, education and income. Data are provided for Canada, the provinces and the territories.

- **Census Metropolitan Areas** (Catalogue No. 93-156)

Included are data on 30 to 65 languages, both for mother tongue and home language, along with official language data. Some tables show 1981 figures. This publication also includes a wide range of other variables. The tables are more detailed than in the "Profile Series". Information is shown for all census metropolitan areas in Canada (25).

- **Canadians and Their Occupations: A Profile** (Catalogue No. 93-157)

This publication contains information on mother tongue and other population characteristics, cross-tabulated by selected occupations. The level of geography is Canada only.

- **Profil des groupes ethniques** (n° 93-154 au catalogue)

Pour certaines origines ethniques, les données sont présentées selon certaines caractéristiques démographiques, sociales et économiques comme l'âge, l'état matrimonial, la langue maternelle, la langue parlée à la maison, la langue officielle, la scolarité et le revenu. Les données sont fournies pour le Canada seulement.

- **Profil de la population immigrante** (n° 93-155 au catalogue)

Cette publication présente les données sur certains aspects de la population immigrante. Les caractéristiques linguistiques y figurent - la langue maternelle, la langue parlée à la maison et la langue officielle - ainsi que d'autres variables telles que l'âge, l'état matrimonial, la scolarité et le revenu. Ces données sont présentées pour le Canada, les provinces et les territoires.

- **Régions métropolitaines de recensement** (n° 93-156 au catalogue)

Cette publication contient des données sur 30 à 65 langues, pour la langue maternelle et la langue parlée à la maison, ainsi que des données sur la langue officielle. Certains tableaux donnent les chiffres de 1981. Cette publication présente également une vaste gamme d'autres variables. Les tableaux sont plus détaillés que dans la série des profils. Les renseignements sont donnés pour toutes les régions métropolitaines de recensement au Canada (25).

- **Les Canadiens et leurs professions: Un profil** (n° 93-157 au catalogue)

Cette publication donne des renseignements sur la langue maternelle et d'autres caractéristiques de la population recoupés selon certaines professions. Les données sont présentées pour le Canada seulement.

## PROFILE SERIES

This series includes language data, as well as information on a wide range of other census variables. Data are presented for a variety of subprovincial areas: Census Divisions and Subdivisions (94-101 to 94-124), Federal Electoral Districts (94-125, 94-126, 94-133 and 94-134), Census Metropolitan Areas and Census Agglomerations (94-127 and 94-128), Census-tracted Centres (Census Tracts and Component Subdivisions) (95-101 to 95-174), Urban and Rural Areas (94-129 and 94-130) and Labour Force Survey Economic Regions (94-131). Data for profiles are also available in machine-readable form.

## FOCUS ON CANADA SERIES

**Canada - A Linguistic Profile** (Catalogue No. 98-131)

This short study analyses three aspects of the language situation in Canada. First, the evolution of the language composition of the country is presented. Some Canadians speak most often in their home a language other than their mother tongue. These language shifts are a major factor in determining the mother tongue of the following generation. This theme is discussed in the second part. Finally, the growth of bilingualism across the country is also highlighted in this profile.

## BASIC SUMMARY TABLES

This series is designed to meet the needs of users who wish to study the characteristics of small areas. Tables provide information on a variety of census variables. The following language tables are available:

## SÉRIE: PROFILS

Cette série comprend des données linguistiques ainsi que des renseignements sur une vaste gamme d'autres variables du recensement. Les données sont présentées pour plusieurs régions infraprovinciales: divisions et subdivisions de recensement (94-101 à 94-124), circonscriptions électorales fédérales (94-125, 94-126, 94-133 et 94-134), régions métropolitaines de recensement et agglomérations de recensement (94-127 et 94-128), centres urbains divisés en secteurs de recensement (secteurs de recensement et subdivisions composantes) (95-101 à 95-174), régions urbaines et rurales (94-129 et 94-130) et régions économiques de l'Enquête sur la population active (94-131). Les données des profils sont également disponibles sous forme lisible par machine.

## SÉRIE: LE CANADA À L'ÉTUDE

**Le Canada - Un profil linguistique** (n° 98-131 au catalogue)

Cette courte étude présente trois aspects de la question linguistique au Canada. Premièrement, on illustre l'évolution de la composition linguistique du pays. À la maison, certains Canadiens parlent le plus souvent une langue autre que leur langue maternelle. Ces transferts linguistiques ont une influence déterminante sur la langue maternelle de la génération suivante. La deuxième partie traite de ce sujet. Enfin, l'augmentation du bilinguisme à travers le pays est également en vedette dans ce profil.

## TABLEAUX SOMMAIRES DE BASE

Cette série est conçue pour répondre aux besoins des utilisateurs qui désirent étudier les caractéristiques des petites régions. Les tableaux donnent des renseignements sur une gamme de variables du recensement. Les tableaux linguistiques suivants sont disponibles:

MT86A01 Population by selected mother tongues (25) and sex (3) - 100% data

LA86B01 Population by official language (5), age groups (8A) and sex (3) - 20% sample data

LA86B02 Population by home language (25) and sex (3) - 20% sample data

The tables are produced for the following four geographic levels: (i) enumeration areas and federal electoral districts; (ii) census subdivisions (municipalities) and census divisions (counties); (iii) census tracts and provincial census tracts; (iv) Canada, provinces, territories and census metropolitan areas.

Data for the basic summary tables are available in machine-readable form to facilitate aggregation and manipulation.

#### ADJUSTED LANGUAGE DATA

For the first time in the 1986 Census, Canadians could report more than one language to the mother tongue and home language questions. Consequently, considerable care must be exercised when comparing 1986 and 1981 data. In order to facilitate the determination of trends, the 1986 Census data have been adjusted. Results are published in a special document entitled "**Adjusted Language Data**". This is available for Canada, the provinces and the territories and for selected census metropolitan areas.

MT86A01 Population selon certaines langues maternelles (25) et le sexe (3) - données intégrales

LA86B01 Population selon la langue officielle (5), le groupe d'âge (8A) et le sexe (3) - données-échantillon (20%)

LA86B02 Population selon la langue parlée à la maison (25) et le sexe (3) - données-échantillon (20%)

Les tableaux sont produits pour les quatre régions géographiques suivantes: (i) secteurs de dénombrement et circonscriptions électorales fédérales; (ii) subdivisions de recensement (municipalités) et divisions de recensement (comtés); (iii) secteurs de recensement et secteurs de recensement provinciaux; (iv) Canada, provinces, territoires et régions métropolitaines de recensement.

Les données des tableaux sommaires de base sont disponibles sous forme lisible par machine pour faciliter l'agrégation et la manipulation des données.

#### DONNÉES LINGUISTIQUES AJUSTÉES

Pour la première fois lors du recensement de 1986, les Canadiens pouvaient déclarer plus d'une langue aux questions sur la langue maternelle et la langue parlée à la maison. Par conséquent, une attention particulière doit être apportée à la comparaison des données de 1986 et 1981. Pour faciliter l'établissement des tendances, les données du recensement de 1986 ont été ajustées. Les résultats ont été publiés dans un document spécial intitulé "**Données linguistiques ajustées**". Les données sont disponibles pour le Canada, les provinces, les territoires et certaines régions métropolitaines de recensement.

TABLE 1. Population Estimates by First Official Language Spoken(1), Census Divisions and Subdivisions, Canada, Provinces and Territories, 1986(2) - 20% Sample Data

TABLEAU 1. Estimations de la population selon la première langue officielle parlée(1), divisions et subdivisions de recensement, Canada, provinces et territoires, 1986(2) - données-échantillon (20%)

| KITIKMEOT, UNORGANIZED            | XXX                     |              |               |                          |                                  |               |                |   |     |                  |     |

(1) The first official language spoken is estimated using two methods and the answers provided to the three language questions, i.e., knowledge of English and French, mother tongue and home language. Information pertaining to the knowledge of official languages is considered first. Method I then considers mother tongue before home language while method II uses the opposite. Regardless of the method of estimation used, the numbers for the "English and French" and "Neither English nor French" are identical.

(2) The sample data are weighted to make them representative of the entire population excluding institutional residents. The latter represents 1.1% of the population. Each cell contains a sampling error, the importance of which, in relation to the estimated number, is more significant when this number is low. In order to maintain confidentiality, data in each cell have been randomly rounded (either up or down) to a multiple of "5". The "-" symbol replaces a zero value. In addition, data are suppressed in cases where the total population of a geostatistical area is lower than 40; in these cases the "XXX" symbol is used. Suppressed data are, however, included in the appropriate aggregate totals of higher geostatistical areas. Data exclude the population of 136 partially-enumerated Indian reserves and settlements (estimated at approximately 45,000 persons) – see appendices 1 and 2; such geostatistical areas are identified by the "" symbol.

(3) Not taking random rounding into consideration, the total population corresponds to the sum of the "English I", "French I", "English and French" and "Neither English nor French" categories or to the sum of "English II", "French II", "English and French" and "Neither English nor French".

(4) Estimates of the minority language population (English in Quebec, French in other provinces and territories as well as the country as a whole) includes half the number of the "English and French" category.

(1) La première langue officielle parlée est estimée par deux méthodes à l'aide des réponses fournies aux trois questions linguistiques, lesquelles portent sur la connaissance de l'anglais et du français, la langue maternelle et la langue habituellement parlée à la maison. L'information relative à la connaissance des langues officielles est d'abord utilisée. La méthode I accorde ensuite priorité à langue maternelle sur la langue parlée à la maison; la méthode II fait l'inverse. Quelle que soit la méthode d'estimation, les effectifs des catégories "Anglais et français" et "Ni l'anglais ni le français" sont identiques.

(2) Les données de l'échantillon sont pondérées pour représenter l'ensemble de la population à l'exclusion des pensionnaires d'institution. Ceux-ci représentent 1.1% de la population. Les effectifs de chaque case comportent une erreur d'échantillonnage dont l'importance par rapport au nombre estimé est plus grande quand ce nombre est faible. Par souci de confidentialité, les effectifs de chaque case sont arrondis aléatoirement à l'un ou l'autre des nombres encadrants dont le chiffre des unités correspond à 0 ou à 5. Le signe "-" remplace le nombre 0. De plus, les données sont supprimées quand la population totale d'une unité géostatistique est inférieure à 40 personnes (le signe "XXX" est employé); ces données sont néanmoins intégrées dans les unités géostatistiques supérieures. Les effectifs ne comprennent pas la population (estimée à 45,000 habitants dans l'ensemble du pays) de 136 réserves indiennes et établissements indiens partiellement dénombrés (voir les annexes 1 et 2); ces unités géostatistiques sont identifiées par le signe "".

(3) A l'arrondissement aléatoire près, la population totale correspond à la somme des catégories "Anglais I", "Français I", "Anglais et français", et "Ni l'anglais ni le français", ou encore à la somme des catégories "Anglais II", "Français II", "Anglais et français", et "Ni l'anglais ni le français".

(4) Les estimations de la population de langue minoritaire (l'anglais au Québec, le français dans les autres provinces et territoires ainsi que dans l'ensemble du pays) incluent la moitié de l'effectif de la catégorie "Anglais et français".

| EDMONTON                      | 777,905                 | 748,015      | 17,090        | 3,500                    | 9,295                            | 756,615       | 8,490          | 18,840  | 2.4 | 10,240            | 1.3 |
| VANCOUVER                     | 1,362,445               | 1,308,385    | 16,440        | 6,850                    | 30,770                           | 1,317,205     | 7,620          | 19,875  | 1.5 | 11,045            | 0.8 |
| VICTORIA                      | 250,845                 | 245,545      | 3,215         | 705                      | 1,385                            | 247,210       | 1,545          | 3,565   | 1.4 | 1,890             | 0.8 |

(1) The first official language spoken is estimated using two methods and the answers provided to the three language questions, i.e., knowledge of English and French, mother tongue and home language. Information pertaining to the knowledge of official languages is considered first. Method I then considers mother tongue before home language while method II uses the opposite. Regardless of the method of estimation used, the numbers for the "English and French" and "Neither English nor French" are identical.

(2) The sample data are weighted to make them representative of the entire population excluding institutional residents. The latter represents 1.1% of the population. Each cell contains a sampling error, the importance of which, in relation to the estimated number, is more significant when this number is low. In order to maintain confidentiality, data in each cell have been randomly rounded (either up or down) to a multiple of "5". The "-" symbol replaces a zero value. Data exclude the population of 136 partially-enumerated Indian reserves and settlements (estimated at approximately 45,000 persons) – see appendices 1 and 2.

(3) Not taking random rounding into consideration, the total population corresponds to the sum of the "English I", "French I", "English and French" and "Neither English nor French" categories or to the sum of "English II", "French II", "English and French" and "Neither English nor French".

(4) Estimates of the minority language population (English in Quebec census metropolitan areas, including the Quebec portion of the Ottawa-Hull CMA, and French in other metropolitan areas, including the Ottawa-Hull CMA as a whole) includes half the number of the "English and French" category.

(1) La première langue officielle parlée est estimée par deux méthodes à l'aide des réponses fournies aux trois questions linguistiques, lesquelles portent sur la connaissance de l'anglais et du français, la langue maternelle et la langue habituellement parlée à la maison. L'information relative à la connaissance des langues officielles est d'abord utilisée. La méthode I accorde ensuite priorité à langue maternelle sur la langue parlée à la maison; la méthode II fait l'inverse. Quelle que soit la méthode d'estimation, les effectifs des catégories "Anglais et français" et "Ni l'anglais ni le français" sont identiques.

(2) Les données de l'échantillon sont pondérées pour représenter l'ensemble de la population à l'exclusion des pensionnaires d'institution. Ceux-ci représentent 1.1% de la population. Les effectifs de chaque case comportent une erreur d'échantillonnage dont l'importance par rapport au nombre estimé est plus grande quand ce nombre est faible. Par souci de confidentialité, les effectifs de chaque case sont arrondis aléatoirement à l'un ou l'autre des nombres encadrants dont le chiffre des unités correspond à 0 ou à 5. Le signe "-" remplace le nombre 0. Les effectifs ne comprennent pas la population (estimée à 45,000 habitants dans l'ensemble du pays) de 136 réserves indiennes et établissements indiens partiellement dénombrés (voir les annexes 1 et 2).

(3) À l'arrondissement aléatoire près, la population totale correspond à la somme des catégories "Anglais I", "Français I", "Anglais et français", et "Ni l'anglais ni le français", ou encore à la somme des catégories "Anglais II", "Français II", "Anglais et français", et "Ni l'anglais ni le français".

(4) Les estimations de la population de langue minoritaire (l'anglais dans les régions métropolitaines du Québec, y compris la partie québécoise de la RMR d'Ottawa-Hull, le français dans les autres régions métropolitaines, y compris l'ensemble de la RMR d'Ottawa-Hull) incluent la moitié de l'effectif de la catégorie "Anglais et français".

**DOCUMENTS DE RÉFÉRENCE**

## DEFINITIONS

The definitions of geographic terms and census concepts are presented here in summary form only. Users should refer to the **1986 Census Dictionary** (Catalogue No. 99-101E or F) for the full definitions and additional remarks related to these concepts and definitions.

### GEOGRAPHIC TERMS

#### REFERENCE MAP

Refers to a map that identifies and locates the boundaries of census geostatistical areas.

#### CENSUS DIVISION (CD)

Refers to the general term applying to census divisions, counties, regional districts, regional municipalities and five other types of geographic areas made up of groups of census subdivisions.

In Newfoundland, Manitoba, Saskatchewan and Alberta provincial law does not provide for geographic areas which are intermediate between the census subdivision and the province. Therefore, census divisions have been created by Statistics Canada in co-operation with the provinces. In all other provinces, the different types of census divisions and their limits are established by provincial law.

#### INDIAN SETTLEMENT

Refers to places, identified by the Federal Department of Indian and Northern Affairs Canada (INAC) for statistical purposes only, where a self-contained group of at least 10 Indian people reside more or less permanently. Indian settlements are usually located on Crown lands under federal or provincial jurisdiction. They have not been set apart for the use and benefit of an Indian band as is the case with Indian reserves.

## DÉFINITIONS

Seul un résumé des définitions des termes géographiques et des concepts du recensement est présenté ici. Les utilisateurs doivent consulter le **Dictionnaire du recensement de 1986** (n° 99-101F ou E au catalogue) pour les définitions complètes et les observations additionnelles pertinentes.

### TERMES GÉOGRAPHIQUE

#### CARTE DE RÉFÉRENCE

Carte qui définit et situe les limites des unités géostatistiques de recensement.

#### DIVISION DE RECENSEMENT (DR)

Terme générique qui désigne les divisions de recensement, les comtés, les districts régionaux, les municipalités régionales et cinq autres types de régions géographiques formés de groupes de subdivisions de recensement.

Les lois provinciales de Terre-Neuve, du Manitoba, de la Saskatchewan et de l'Alberta ne prévoient pas la création de secteurs géographiques intermédiaires entre la subdivision de recensement et la province. C'est pourquoi les divisions de recensement ont été établies par Statistique Canada en collaboration avec les provinces. Dans toutes les autres provinces, les divers types de divisions de recensement sont définis et délimités par des lois provinciales.

#### ÉTABLISSEMENT INDIEN

Lieu, désigné par le ministère des Affaires indiennes et du Nord Canada (AINC) à des fins statistiques seulement, où un groupe indépendant d'au moins 10 autochtones habitent de façon plus ou moins permanente. Les établissements indiens sont généralement situés sur des terres de la Couronne soumises à l'autorité fédérale ou à celle des administrations provinciales. Contrairement aux réserves indiennes, ces terres ne sont pas réservées à l'usage exclusif d'une bande indienne.

## CENSUS SUBDIVISION TYPE

Census subdivisions are classified into various types, according to official designations adopted by provincial or federal authorities. With the exception of unorganized territories, Indian reserves and Indian settlements, hamlets in the Northwest Territories and settlements in the Yukon Territory, the type indicates the municipal status of a CSD. The following list indicates the abbreviations used for the most common CSD types:

|     |  |
|-----|--|
| BOR | Borough                                  |
| C   | City - Cité                              |
| CM  | County (Municipality)                    |
| COM | Community                                |
| CT  | Canton (Municipalité de)                 |
| CU  | Cantons unis (Municipalité de)           |
| DM  | District (Municipality)                  |
| HAM | Hamlet                                   |
| ID  | Improvement District                     |
| LGD | Local Government District                |
| LOT | Township and Royalty                     |
| MD  | Municipal District                       |
| NH  | Northern Hamlet                          |
| NV  | Northern Village                         |
| P   | Paroisse (Municipalité de)               |
| PAR | Parish                                   |
| R   | Indian Reserve - Réserve indienne        |
| RM  | Rural Municipality                       |
| RV  | Resort Village                           |
| SA  | Special Area                             |
| SCM | Subdivision of County Municipality       |
| SD  | Sans désignation (Municipalité)          |
| S-E | Indian Settlement - Établissement indien |
| SET | Settlement                               |
| SRD | Subdivision of Regional District         |
| SUN | Subdivision of Unorganized               |
| SV  | Summer Village                           |
| T   | Town                                     |
| TP  | Township                                 |
| UNO | Unorganized - Non organisé               |
| V   | Ville                                    |
| VC  | Village Cri                              |
| VK  | Village Naskapi                          |
| VL  | Village                                  |
| VN  | Village Nordique                         |

## PROVINCE

Refers to the major political division of Canada. From a statistical point of view, it is a basic unit for which data are tabulated and cross-classified. In census publications, provincial tables include the Yukon Territory and the Northwest Territories.

## GENRE DE SUBDIVISION DE RECENSEMENT

Les subdivisions de recensement sont classées en divers genres selon les appellations adoptées par les autorités provinciales ou fédérales. À l'exception des territoires non organisés, des réserves indiennes et des établissements indiens, des "hamlets" dans les Territoires du Nord-Ouest et des "settlements" dans le Yukon, le genre de subdivision de recensement indique son statut. Voici la liste des abréviations des genres de subdivisions de recensement les plus courants:

|     |  |
|-----|--|
| BOR | Borough                                  |
| C   | City - Cité                              |
| CM  | County (Municipality)                    |
| COM | Community                                |
| CT  | Canton (Municipalité de)                 |
| CU  | Cantons unis (Municipalité de)           |
| DM  | District (Municipality)                  |
| HAM | Hamlet                                   |
| ID  | Improvement District                     |
| LGD | Local Government District                |
| LOT | Township and Royalty                     |
| MD  | Municipal District                       |
| NH  | Northern Hamlet                          |
| NV  | Northern Village                         |
| P   | Paroisse (Municipalité de)               |
| PAR | Parish                                   |
| R   | Indian Reserve - Réserve indienne        |
| RM  | Rural Municipality                       |
| RV  | Resort Village                           |
| SA  | Special Area                             |
| SCM | Subdivision of County Municipality       |
| SD  | Sans désignation (Municipalité)          |
| S-E | Indian Settlement - Établissement indien |
| SET | Settlement                               |
| SRD | Subdivision of Regional District         |
| SUN | Subdivision of Unorganized               |
| SV  | Summer Village                           |
| T   | Town                                     |
| TP  | Township                                 |
| UNO | Unorganized - Non organisé               |
| V   | Ville                                    |
| VC  | Village Cri                              |
| VK  | Village Naskapi                          |
| VL  | Village                                  |
| VN  | Village Nordique                         |

## PROVINCE

Principale division politique du Canada. Du point de vue statistique, c'est une unité de base pour laquelle toutes les données sont totalisées et recoupées. Dans les publications du recensement, les tableaux relatifs aux provinces comprennent le Yukon et les Territoires du Nord-Ouest.

## CENSUS METROPOLITAN AREA (CMA)

### Concept and General Criteria

The general concept of a census metropolitan area (CMA) is one of a very large urbanized core, together with adjacent urban and rural areas which have a high degree of economic and social integration with that core.

A CMA is defined as the main labour market area of an urban area (the urbanized core) of at least 100,000 population, based on the previous census. Once an area becomes a CMA, it is retained in the program even if its population subsequently declines.

Smaller labour market areas, centred on urbanized cores of at least 10,000 population, are included in the census agglomeration (CA) program.

CMAs are comprised of one or more census subdivisions (CSDs) which meet at least one of the following criteria:

- (1) the CSD falls completely or partly inside the urbanized core;
- (2) at least 50% of the employed labour force living in the CSD works in the urbanized core; or
- (3) at least 25% of the employed labour force working in the CSD lives in the urbanized core.

### Regular and Consolidated CMAs

In some parts of the country, adjacent CMAs and CAs are socially and economically interrelated. When this occurs, they are grouped into a single consolidated CMA. A regular CMA, on the other hand, is free-standing. It is either not adjacent to another CMA or CA or not sufficiently related to another CMA or CA to be consolidated.

To be eligible for consolidation, the total commuting interchange between the adjacent CMAs and CAs must be equal to at least 35% of the labour force living in the smaller CMA or CA. After consolidation, the original CMAs and CAs become subregions (called primary CMAs and CAs) within the consolidated CMA.

## RÉGION MÉTROPOLITAINE DE RECENSEMENT (RMR)

### Concept et critères généraux

Le concept général de région métropolitaine de recensement (RMR) s'applique à un noyau urbanisé très important ainsi qu'aux régions urbaines et rurales hautement intégrées à ce noyau sur le plan économique et social.

Le terme RMR désigne la principale zone du marché du travail d'une région urbaine (noyau urbanisé) comptant 100,000 habitants ou plus, d'après les chiffres de population du recensement précédent. Lorsqu'une région devient une RMR, elle continue de faire partie du programme même si, ultérieurement, elle subit une baisse de population.

Quant aux zones des marchés du travail moins vastes des noyaux urbanisés comptant 10,000 habitants ou plus, elles font partie du programme des agglomérations de recensement (AR).

Chaque RMR est constituée d'une subdivision de recensement (SDR) ou plus répondant à au moins un des critères suivants:

- (1) la SDR se trouve entièrement ou en partie dans le noyau urbanisé;
- (2) au moins 50% de la population active occupée demeurant dans la SDR travaille dans le noyau urbanisé;
- (3) au moins 25% de la population active occupée travaillant dans la SDR demeure dans le noyau urbanisé.

### RMR normales et unifiées

Dans certaines parties du pays, les RMR et les AR voisines sont unies par des liens sociaux et économiques. Dans ce cas, elles sont regroupées de manière à constituer une seule RMR unifiée. Par contre, la RMR normale est indépendante. Ou bien elle n'est pas attenante à une autre RMR ou AR, ou bien elle ne possède pas de liens suffisants avec une autre RMR ou AR pour lui être réunie.

Pour justifier l'unification, il faut que le nombre total de personnes faisant la navette entre les RMR ou AR voisines représente au moins 35% de la population active demeurant dans la plus petite RMR ou AR. Une fois regroupées, les RMR et AR d'origine deviennent des sous-régions (nommées RMR et AR primaires) au sein de la RMR unifiée.

### Additional Criteria and Procedures for Inclusion of CSDs in CMAs

In addition to criteria (1), (2) and (3) outlined above, the following criteria are applied to determine if a CSD is to be included in the CMA:

- (4) If the commuting flow is less than 100 persons, CSDs are excluded from the CMA, even if criteria (2) or (3) apply.
- (5) Even if criteria (2), (3) or (4) apply, CSDs may be included or excluded to maintain the contiguity of the CMA.
- (6) CSD components of census tracted CMAs are retained for historical comparability even if they no longer meet criteria (2) or (3).

All the above criteria have been ranked in priority order. A CSD meeting the criteria for two or more CMAs/CAs is included in the one for which it has the highest ranked criterion. If the CSD meets criteria that have the same rank, the decision is based on the actual population or on the number of commuters involved.

Exceptions to the above delineation criteria may occasionally be made in certain special situations.

Users should be aware that CMA boundaries may not conform precisely with the main labour market area, since CMAs must respect CSD limits. CMAs may also differ from metropolitan areas designated by local authorities for planning or other purposes.

### **INDIAN RESERVE**

Refers to land, the legal title to which is vested in Her Majesty, that has been set apart for the use and benefit of an Indian band and that is subject to the terms of the Indian Act. Since it is generally excluded from local jurisdiction and is administered by the Federal Department of Indian and Northern Affairs Canada (INAC), it is classified as a census subdivision (CSD) by Statistics Canada.

### Autres critères et procédures déterminant l'inclusion des SDR dans les RMR

En plus des critères (1), (2) et (3) énoncés ci-dessus, on applique les critères suivants pour déterminer si une SDR peut être incluse dans la RMR:

- (4) Si le nombre de navetteurs est inférieur à 100, la SDR est exclue de la RMR, même si elle répond aux critères (2) ou (3).
- (5) Même si la SDR répond aux critères (2), (3) ou (4), la nécessité de maintenir la continuité de la RMR déterminera son inclusion ou son exclusion.
- (6) Les SDR des RMR subdivisées en secteurs de recensement sont maintenues même si elles ne satisfont plus aux critères (2) ou (3), et ce afin de permettre la comparabilité historique.

Tous les critères ci-dessus sont classés par ordre d'importance. Lorsqu'une SDR satisfait à certains d'entre eux relativement à plus d'une RMR/AR, on prend la région ou l'agglomération vis-à-vis de laquelle la SDR répond au critère le plus haut placé dans la liste et on y inclut cette dernière. Si les critères ont la même importance, la décision est déterminée soit par la population réelle, soit par le nombre de navetteurs en cause.

Il arrive à l'occasion que les critères de délimitation ne soient pas respectés dans certains cas spéciaux.

Les utilisateurs doivent savoir que les limites d'une RMR ne coïncident pas nécessairement avec celles de la principale zone du marché du travail, les RMR devant respecter les limites des SDR. Il se peut également que les RMR ne soient pas exactement identiques aux régions métropolitaines établies par les autorités locales à des fins de planification ou autres.

### **RÉSERVE INDIENNE**

Territoire dont le titre légal de propriété appartient à Sa Majesté la Reine, qui a été réservé à l'usage et au profit d'une bande indienne et qui est assujéti aux termes de la Loi sur les Indiens. Puisque les réserves indiennes échappent généralement à la compétence des autorités locales et sont administrées par le ministère des Affaires indiennes et du Nord Canada (AINC), elles sont considérées par Statistique Canada comme des subdivisions de recensement (SDR).

## CENSUS SUBDIVISION (CSD)

Refers to the general term applying to municipalities, Indian reserves, Indian settlements and unorganized territories.

In Newfoundland, Nova Scotia and British Columbia, the term also describes geostatistical areas that have been created by Statistics Canada in co-operation with the provinces as equivalents for municipalities.

## GEOSTATISTICAL AREA

Refers to geographic areas delineated or employed for the tabulation and dissemination of census data. This term applies to provinces and territories, census divisions, census subdivisions, census consolidated subdivisions, census metropolitan areas, census agglomerations, primary census metropolitan areas, primary census agglomerations, census tracts, provincial census tracts, urban areas, federal electoral districts and enumeration areas.

## CENSUS CONCEPTS:

### MOTHER TONGUE

Refers to the first language learned in childhood and still understood by the individual at the time of the census.

In 1986, the following instructions were provided to respondents:

"You should report the first language you learned in childhood, that is, before you went to school. If you no longer understand that language, report the second language you learned. If you are answering for someone else, report the first language that he/she learned in childhood.

If you understand more than one language, report the one you learned first. If you learned two languages at the same time, report the language you **yourself** spoke **most often at home**. If you used the two languages **equally often**, report both.

## SUBDIVISION DE RECENSEMENT (SDR)

Terme générique qui désigne les municipalités, les réserves indiennes, les établissements indiens et les territoires non organisés.

À Terre-Neuve, en Nouvelle-Écosse et en Colombie-Britannique, l'expression désigne également des unités géostatistiques créées comme équivalents des municipalités et délimitées par Statistique Canada en collaboration avec les provinces.

## UNITÉ GÉOSTATISTIQUE

Toute région géographique délimitée ou utilisée pour la totalisation et la diffusion des données du recensement. L'expression englobe les provinces et territoires, les divisions de recensement, les subdivisions de recensement, les subdivisions de recensement unifiées, les régions métropolitaines de recensement, les agglomérations de recensement, les régions métropolitaines de recensement primaires, les agglomérations de recensement primaires, les secteurs de recensement, les secteurs de recensement provinciaux, les régions urbaines, les circonscriptions électorales fédérales et les secteurs de dénombrement.

## CONCEPTS DU RECENSEMENT:

### LANGUE MATERNELLE

Première langue apprise dans l'enfance et encore comprise par le recensé au moment du recensement.

En 1986, les instructions ci-après étaient fournies aux recensés:

"Vous devez indiquer la première langue que vous avez apprise dans votre petite enfance, c'est-à-dire avant d'aller à l'école. Si vous ne la comprenez plus, indiquez la seconde langue que vous avez apprise. Si vous répondez pour une autre personne, indiquez la première langue qu'elle a apprise dans sa petite enfance.

Si vous comprenez plusieurs langues, indiquez celle que vous avez apprise en premier lieu. Si vous en avez appris deux simultanément, indiquez celle que vous parliez **vous-même le plus souvent à la maison**. Si vous les utilisiez **également**, indiquez-les toutes les deux.

For a child who has not yet learned a language, report the language he/she will first be learning **at home**. If he/she is learning two languages at the same time, report the one in which he/she is spoken to **most often**. If the two languages are used **equally often**, report both.

Persons who speak an **Indian** language (**from India**) should not report Indian but rather Hindi, Urdu, Punjabi or some other language as applicable. Persons who speak an **Amerindian** language (North American Indian) should report Cree, Ojibway or some other Amerindian language as applicable."

Dans le cas d'un enfant qui n'a pas encore appris à parler, indiquez la langue qu'il apprendra en premier lieu **à la maison**. S'il apprend simultanément deux langues, indiquez celle dans laquelle on lui parle **le plus souvent**. Si **les deux sont utilisées également**, indiquez-les toutes les deux.

Les personnes de langue **indienne** (**de l'Inde**) ne doivent pas indiquer indien mais plutôt hindi, ourdou, pendjabi ou une autre langue, selon le cas. Les personnes de langue **amérindienne** (indien(ne) de l'Amérique du Nord) doivent indiquer le cri, l'ojibway ou une autre langue amérindienne, selon le cas."

## OFFICIAL LANGUAGE

Refers to the ability to conduct a conversation in English and French, the official languages of Canada.

It should be emphasized that the official language question data are based on the individual's own assessment of his or her abilities.

In 1986, the following instructions were provided to respondents:

"Do not report French or English learned at school unless you can conduct a conversation of some length on various topics in that language.

For a child who has not yet learned a language, report the language spoken most often at home if it is either English or French. If the two languages are used equally often, report "English and French". If neither language is used often, mark "Neither English nor French".

If you are mute, report English, French or both provided you are able to make yourself understood in one or both of these languages."

## LANGUE OFFICIELLE

Indique si le recensé peut soutenir une conversation en anglais ou en français, les langues officielles du Canada.

Il convient de souligner que les données provenant de la question sur les langues officielles portent sur l'auto-évaluation par les recensés de leur capacité de parler les deux langues officielles.

En 1986, les instructions ci-après étaient fournies aux recensés:

"N'indiquez pas l'anglais ou le français appris à l'école à moins de pouvoir soutenir une conversation assez longue sur divers sujets dans cette langue.

Dans le cas d'un enfant qui n'a pas encore appris à parler, indiquez la langue parlée le plus souvent à la maison s'il s'agit de l'anglais ou du français. Si l'une est aussi fréquemment utilisée que l'autre, indiquez "L'anglais et le français". Cochez la case "Ni l'anglais ni le français" quand ni l'une ni l'autre n'est fréquemment utilisée.

Si vous êtes muet(te), indiquez l'anglais, le français ou les deux dans la mesure où vous pouvez vous faire comprendre dans cette (ces) langue(s)."

## HOME LANGUAGE

Refers to the language spoken at home by the individual at the time of the census. If more than one language was spoken, the language spoken most often by the individual was to be reported.

In 1986, the following instructions were provided to respondents:

"You should report the language you **yourself** speak **most often at home**. If you are answering for someone else, report the language that **he/she** speaks **most often**.

If you speak two languages **equally often**, report both.

For a child who has not yet learned a language, report the language spoken **most often at home**. If two languages are used **equally often**, report both.

If you are mute, report the language you use most often at home to make yourself understood.

If you live alone, report the language in which you feel most comfortable.

Persons who speak an **Indian** language (**from India**) should not report Indian but rather Hindi, Urdu, Punjabi or some other language as applicable. Persons who speak an **Amerindian** language (North American Indian) should report Cree, Ojibway or some other Amerindian language as applicable."

## INSTITUTIONAL RESIDENT

Refers to a resident of an "institutional" collective dwelling, other than staff members and their families.

"Institutional" collective dwellings are orphanages and children's homes, special care homes and institutions for the elderly and chronically ill, hospitals, psychiatric institutions, treatment centres and institutions for the physically handicapped, correctional and penal institutions, young offenders facilities and jails.

## LANGUE PARLÉE À LA MAISON

Langue que le recensé parlait à la maison au moment du recensement. Si le recensé parlait plus d'une langue, il devait indiquer la langue qu'il utilisait le plus fréquemment.

En 1986, les instructions ci-après étaient fournies aux recensés:

"Vous devez indiquer la langue que vous parlez **vous-même le plus souvent à la maison**. Si vous répondez pour une autre personne, indiquez la langue **qu'elle parle le plus souvent**.

Si vous parlez deux langues **également**, indiquez-les toutes les deux.

Dans le cas d'un enfant qui ne parle pas encore, indiquez la langue **le plus souvent parlée à la maison**. Si deux langues sont **également** utilisées, indiquez-les toutes les deux.

Si vous êtes muet(te), indiquez la langue dont vous vous servez le plus souvent à la maison pour vous faire comprendre.

Si vous demeurez seul(e), indiquez la langue dans laquelle vous êtes le plus à l'aise.

Les personnes d'origine **indienne (de l'Inde)** ne doivent pas indiquer indien mais plutôt hindi, ourdou, pendjabi ou une autre langue, selon le cas. Les personnes d'origine **amérindienne** (indien(ne) de l'Amérique du Nord) doivent indiquer le cri, l'ojibway ou une autre langue amérindienne, selon le cas."

## PENSIONNAIRE D'INSTITUTION

Résident d'un logement collectif d'institution, autre qu'un membre du personnel et sa famille.

Les logements collectifs d'institution comprennent les orphelinats et foyers pour enfants, les centres de soins spéciaux et établissements pour personnes âgées et malades chroniques, les hôpitaux, les hôpitaux psychiatriques, les centres de traitement et établissements pour handicapés physiques, les établissements pénitentiaires et établissements de correction, les foyers pour jeunes contrevenants et les prisons.

## SAMPLING AND WEIGHTING

The 1986 Census data were collected either on a 100% basis (i.e. for all households) or on a sample basis (i.e. from only a random sample of households) with data weighted to provide estimates of the entire population. The information in this report was collected on a 20% sample basis and weighted up to compensate for sampling. All table headings are noted accordingly. (Note that, on Indian reserves and in remote areas, all data were collected on a 100% basis. In the Northwest Territories, data were collected on a 100% basis but, for the communities of Fort Smith, Hay River, Pine Point and Yellowknife, the data were processed on a 20% basis.)

For any given geographic area, the weighted population, household, dwelling or family, total or subtotal may differ from that shown in reports containing data collected on a 100% basis. Such variation (in addition to the effect of random rounding) will be due to sampling.

## DATA QUALITY

### GENERAL

The 1986 Census was a large and complex undertaking and, while considerable effort was taken to ensure high standards throughout all collection and processing operations, the resulting estimates are inevitably subject to a certain degree of error. Users of census data should be aware such error exists, and have some appreciation of its main components, so that they can assess the usefulness of census data for their purposes and the risks involved in basing conclusions or decisions on these data.

Errors can arise at virtually every stage of the census process from the preparation of materials, through the listing of dwellings and data collection to processing. Some errors occur more or less at random, and when the individual responses are aggregated for a sufficiently large group, such errors tend to cancel out. For errors of this nature, the larger the group, the more accurate the corresponding estimate. It is for this reason that

## ÉCHANTILLONNAGE ET PONDÉRATION

Les données du recensement de 1986 ont été recueillies sur une base de 100% (c'est-à-dire auprès de tous les ménages) ou par un échantillonnage aléatoire des ménages; ces données sont pondérées afin de fournir des estimations sur l'ensemble de la population. Les renseignements figurant dans le présent bulletin ont été recueillis auprès d'un échantillon de 20% et pondérés afin de compenser l'effet de l'échantillonnage. Tous les titres des tableaux ont été annotés en conséquence. (Veuillez remarquer que, dans les réserves indiennes et les régions éloignées, toutes les données ont été recueillies auprès de toute la population. Dans les Territoires du Nord-Ouest, les données ont été recueillies auprès de toute la population mais, pour les collectivités de Fort Smith, Hay River, Pine Point et Yellowknife, seulement 20% des données ont été traitées.)

Quelle que soit la région géographique, le total ou total partiel pondéré de la population, des ménages, des logements ou des familles peut différer de celui qui figure dans les bulletins de données intégrales. Cet écart (autre l'effet de l'arrondissement aléatoire) sera attribuable à l'échantillonnage.

## QUALITÉ DES DONNÉES

### GÉNÉRALITÉS

Le recensement de 1986 a été un projet complexe de grande envergure. Même si l'on a déployé des efforts considérables pour maintenir des normes élevées tout au cours des activités de collecte et de traitement, les estimations obtenues sont inévitablement entachées d'erreurs. Les utilisateurs doivent savoir que ces erreurs existent et avoir une idée générale des principales composantes du recensement afin d'être en mesure de déterminer si les données du recensement peuvent leur être utiles et évaluer les risques que comporte le fait de baser leurs conclusions ou leurs décisions sur ces données.

Des erreurs peuvent se produire pratiquement à toutes les étapes du recensement, allant de la préparation des documents au traitement des données, en passant par l'établissement des listes des logements et la collecte des données. Certaines erreurs peuvent survenir plus ou moins au hasard et, lorsque les différentes réponses sont agrégées pour un groupe suffisamment grand, elles tendent à s'annuler. Dans le cas des erreurs de cette

users are advised to be cautious when using small estimates. There are some errors, however, which might occur more systematically, and which result in "biased" estimates. Because the bias from such errors is persistent no matter how large the group for which responses are aggregated, and because bias is particularly difficult to measure, systematic errors are a more serious problem for most data users than the random errors referred to previously.

For census data in general, the principal types of error are as follows:

- **coverage errors**, which occur when dwellings and/or individuals are missed, incorrectly included or double counted;
- **non-response errors**, which result from the fact that responses cannot be obtained from a small number of households and/or individuals, because of extended absence or some other reason;
- **response errors**, which occur when the respondent, or sometimes the Census Representative, misunderstands a census question, and records an incorrect response;
- **processing errors**, which can occur at various steps including: **coding**, when "write-in" responses are transformed into numerical codes by clerks; **data capture**, when responses are transferred from the census questionnaire to computer tapes by key-entry operators; and **imputation**, when a "valid", but not necessarily correct, response is inserted into a record by the computer to replace missing or "invalid" data ("valid" and "invalid" referring to whether or not the response is consistent with other information on the record);

nature, plus le groupe est grand, plus l'estimation correspondante est exacte. C'est pour cette raison que les utilisateurs sont invités à employer avec une certaine réserve les petites estimations. Par contre, d'autres erreurs peuvent se produire systématiquement et entraîner des estimations "biaisées". Comme le biais découlant de ces erreurs est persistant, peu importe la taille du groupe pour lequel les réponses sont agrégées, et qu'il est particulièrement difficile à mesurer, les erreurs systématiques posent un plus grave problème à la plupart des utilisateurs des données que les erreurs aléatoires mentionnées plus haut.

En ce qui concerne les données du recensement en général, les principaux types d'erreur sont les suivants:

- les **erreurs d'observation**, qui se produisent lorsqu'on oublie des logements ou des personnes, qu'on les englobe à tort ou qu'on les compte deux fois;
- les **erreurs dues à la non-réponse**, qui découlent du fait qu'on n'a pas pu obtenir de réponses d'un petit nombre de ménages et(ou) de personnes à cause d'une absence prolongée ou pour toute autre raison;
- les **erreurs de réponse**, qui surviennent lorsque le répondant, et parfois les recenseurs, a mal interprété une question du recensement et a inscrit une mauvaise réponse;
- les **erreurs de traitement**, qui peuvent se produire à diverses étapes, notamment: au **codage**, lorsque les commis transforment les réponses en toutes lettres en codes numériques; à la **saisie des données**, lorsque les préposés à l'introduction des données transfèrent sur les bandes pour ordinateur les réponses figurant sur le questionnaire du recensement; à l'**imputation**, lorsque l'ordinateur insère dans un enregistrement une réponse "valide", mais pas nécessairement exacte, pour remplacer des données manquantes ou "invalides" (une réponse est "valide" si elle est conforme aux autres renseignements de l'enregistrement, elle est "invalides" si elle n'est pas conforme);

- **sampling errors**, which apply only to the supplementary questions on the "long form" asked of a one-fifth sample of households, and which arise from the fact that the results for these questions, when weighted up to represent the whole population, inevitably differ somewhat from the results which would have been obtained if these questions had been asked of all households.

- **les erreurs d'échantillonnage**, qui s'appliquent uniquement aux questions supplémentaires figurant sur la formule complète et s'adressant à un échantillon d'un cinquième des ménages; elles résultent du fait que les réponses à ces questions, lorsqu'elles sont pondérées pour représenter l'ensemble de la population, diffèrent inévitablement des résultats qu'on aurait obtenus si on avait posé ces questions à tous les ménages.

The above types of error each have both random and systematic components. Usually, however, the systematic component of sampling error is very small in relation to its random component. For the other non-sampling errors, both random and systematic components may be significant.

Les types d'erreur ci-dessus ont chacun une composante aléatoire et une composante systématique. Toutefois, la composante systématique des erreurs d'échantillonnage est généralement très faible par rapport à la composante aléatoire. Par contre, dans le cas des erreurs non dues à l'échantillonnage, les deux composantes peuvent être importantes.

## COVERAGE ERRORS

Coverage errors affect the accuracy of the census counts, that is the sizes of the various census universes: population, families, households and dwellings. While steps have been taken to correct certain identifiable errors, the final counts are still subject to some degree of error resulting from persons or dwellings being missed, incorrectly included in the census or double counted.

## ERREURS D'OBSERVATION

Les erreurs d'observation peuvent influencer sur la précision des chiffres du recensement, c'est-à-dire la taille des divers univers du recensement: la population, les familles, les ménages et les logements. Bien qu'on ait pris quelques mesures pour corriger les erreurs identifiables, une certaine marge d'erreur subsiste toujours dans les chiffres définitifs du fait que des logements ou des personnes ont été oubliés, pris en compte par erreur dans le recensement ou comptés deux fois.

Missed dwellings or persons result in **under-coverage**. Dwellings can be missed because of misunderstanding of enumeration area (EA) boundaries, or because dwellings are hidden or appear uninhabitable. Persons can be missed when their dwelling is missed or classified as vacant, or when individual household members are omitted from the questionnaire because the respondent misinterprets the instructions on whom to include. Some individuals may be missed because they have no usual residence and did not spend census night in any dwelling.

Si des logements ou des personnes n'ont pas été pris en compte alors qu'ils auraient dû l'être, on a un **sous-dénombrement**. Des logements peuvent être oubliés à la suite d'une mauvaise interprétation des limites des secteurs de dénombrement (SD) ou du fait que des logements sont cachés ou semblent inhabitables. Des personnes peuvent être oubliées quand le logement est oublié ou classé comme inoccupé, ou quand certains membres des ménages sont omis sur le questionnaire parce que le répondant a mal interprété les instructions concernant les personnes à inclure. Certaines personnes peuvent être oubliées parce qu'elles n'ont aucun lieu habituel de résidence et qu'elles ne se trouvaient dans aucun logement la nuit du recensement.

Dwellings or persons that are incorrectly included or double counted result in **overcoverage**. Overcoverage of dwellings can occur when structures unfit for habitation are listed as dwellings, or when units which do not meet the census definition of a dwelling are listed separately, instead of being treated as part of a larger dwelling. Double counting of dwellings can occur, for example, because of ambiguity over EA boundaries. Persons can be double counted because their dwelling is double counted or because the guidelines on whom to include on the questionnaire have been misunderstood. Occasionally, someone who is not a Canadian resident may, incorrectly, be enumerated in the census. On average, overcoverage is less likely to occur than undercoverage and, as a result, counts of dwellings and persons are likely to be slightly underestimated.

In 1986, four studies were undertaken to measure different aspects of coverage error. First, a sample of dwellings listed as vacant were revisited to verify that they really were vacant on Census Day. Adjustments have been made to the final census counts for households missed because their dwelling was incorrectly classified as vacant. Secondly, a sample of persons enumerated as temporary residents was selected to verify whether or not they were enumerated at their usual place of residence. Based on this sample, estimates were obtained of the number of persons missed because they were temporarily absent from their usual place of residence. Corresponding adjustments were made to the final population counts. Despite these adjustments, the final counts are still subject to some undercoverage. For Canada as a whole and for each province, the magnitude of this residual undercoverage in the 1986 Census is being measured by means of a special study known as the Reverse Record Check. Undercoverage tends to be higher for certain segments of the population such as young adult males and recent immigrants. Undercoverage is offset to some degree by overcoverage errors, and in 1986 for the first time a special study was carried out to investigate overcoverage errors.

Les logements ou les personnes qui ont été pris en compte par erreur ou qui ont été comptés deux fois donnent lieu à un **surdénombrement**. Le surdénombrement des logements peut se produire lorsque des constructions ne convenant pas à l'habitation sont comptées comme des logements ou lorsque des unités qui ne correspondent pas à la définition d'un logement utilisée dans le recensement sont énumérées séparément au lieu d'être considérées comme faisant partie d'un grand logement. Le double compte des logements peut se produire, par exemple dans les cas où les limites des SD ne sont pas clairement définies. Les personnes peuvent être comptées deux fois parce que leur logement est compté deux fois ou parce que les lignes directrices concernant les personnes à inscrire dans le questionnaire ont été mal interprétées. Parfois, une personne qui n'habite pas habituellement le Canada peut être comptée, à tort, dans le recensement. En moyenne, le surdénombrement est moins susceptible de se produire que le sous-dénombrement; les chiffres des logements et des personnes sont donc probablement légèrement sous-estimés.

En 1986, on a entrepris quatre études pour mesurer les différents aspects des erreurs d'observation. Premièrement, on a revisité un échantillon des logements dénombrés comme inoccupés afin de vérifier s'ils étaient vraiment inoccupés le jour du recensement. On a rectifié les chiffres définitifs du recensement pour tenir compte des ménages oubliés parce que leur logement a été classé par erreur comme inoccupé. Deuxièmement, on a prélevé un échantillon des personnes dénombrées comme résidents temporaires pour vérifier si elles ont été dénombrées à leur lieu habituel de résidence. Au moyen de cet échantillon, on a pu estimer le nombre de personnes qui ont été oubliées parce qu'elles étaient temporairement absentes de leur lieu habituel de résidence. On a apporté les corrections correspondantes aux chiffres de population définitifs. Malgré ces corrections, les chiffres définitifs sont encore sujets à un certain sous-dénombrement. Pour l'ensemble du Canada et pour chaque province, on mesure l'ampleur de ce sous-dénombrement résiduel dans le recensement de 1986 au moyen d'une étude spéciale: la Contre-vérification des dossiers. Le sous-dénombrement est généralement plus élevé pour certains groupes de la population, tels que les jeunes hommes adultes et les récents immigrants. Le sous-dénombrement est compensé dans une certaine mesure par les erreurs de surdénombrement; en 1986, pour la première fois une étude spéciale est maintenant en cours, pour déterminer les erreurs de surdénombrement.

## OTHER NON-SAMPLING ERRORS

While coverage errors affect the number of units in the various census universes, other errors affect the characteristics of those units.

Sometimes, it is not possible to obtain a complete response from a household, even though the dwelling was identified as occupied and a questionnaire dropped off. The household members may have been away throughout the census period or, in rare instances, the householder may have refused to complete the form. More frequently, the questionnaire is returned but information is missing for some questions or individuals. Considerable effort is devoted to ensuring as complete a response as possible. Census Representatives edit the questionnaires and follow up any missing information. The Census Representative's work is then checked by both a supervisor and a quality control technician. Despite this, at the end of the collection stage, a small number of responses are missing. Although missing entries are eliminated during processing, there remains some potential non-response error. This is particularly serious if the non-respondents differ in some respects from the respondents since, as described in a later paragraph, a missing value is replaced by the corresponding entry for a "similar" record. If respondents and non-respondents differ in terms of the characteristics involved, this procedure will result in non-response bias.

Even when a response is obtained, it may not be entirely accurate. The respondent may have misinterpreted the question or may have guessed the answer, especially when answering on behalf of another, possibly absent, household member. Such errors are referred to as response errors. While response errors usually arise from inaccurate information provided by respondents, they can also result from mistakes by the Census Representative when completing certain parts of the questionnaire such as structural type of dwelling, or when calling back to obtain a missing response.

## AUTRES ERREURS NON DUES À L'ÉCHANTILLONNAGE

Les erreurs d'observation font varier le nombre d'unités dans les divers univers du recensement, tandis que d'autres genres d'erreur font varier les caractéristiques de ces unités.

Il est parfois impossible d'obtenir d'un ménage une réponse complète, même si le logement a été jugé occupé et un questionnaire a été livré. Les membres du ménage ont pu s'absenter pendant toute la période du recensement ou, dans de rares cas, le chef de ménage a pu refuser de remplir le questionnaire. Il arrive plus souvent que le questionnaire est retourné, mais que les données fournies à certaines questions ou pour certaines personnes sont incomplètes. Nous déployons des efforts considérables pour obtenir la réponse la plus complète possible. Les recenseurs vérifient les questionnaires et effectuent des suivis s'il manque des données. Le travail des recenseurs est ensuite vérifié par un surveillant et un technicien du contrôle qualitatif. Malgré ces mesures, à la fin de la phase de collecte des données, il manque un petit nombre de réponses. Bien que les entrées manquantes soient éliminées pendant le traitement des données, il peut toujours se glisser quelques erreurs dues à la non-réponse. Ce genre d'erreur est particulièrement grave si les non-répondants sont différents des répondants à certains égards puisque, comme on le décrit dans un paragraphe ultérieur, la valeur manquante est remplacée par une valeur correspondante tirée d'un dossier "similaire". Si certaines caractéristiques des non-répondants diffèrent de celles des répondants, cette méthode entraîne un biais dû à la non-réponse.

Même lorsqu'on obtient une réponse, il se peut qu'elle ne soit pas tout à fait précise. Le répondant peut avoir mal interprété la question ou avoir donné une réponse incertaine, surtout s'il a répondu pour un autre membre du ménage qui était peut-être absent. Ces erreurs sont appelées erreurs de réponse. Bien que les erreurs de réponse soient en général attribuables à des renseignements imprécis fournis par les répondants, elles peuvent parfois être liées à des erreurs qu'a faites le recenseur au moment où il a rempli certaines sections du questionnaire, comme le type de construction résidentielle, ou lorsqu'il a rappelé le répondant pour obtenir des données manquantes.

Some of the questions on the census document require a verbal response to be written in. During regional processing, these "write-in" entries are given a numeric code. Coding errors can occur, especially when the code list is extensive (as with, for example, language, ethnic origin, industry and occupation), and when the written response is ambiguous, incomplete or difficult to read. Coding errors are controlled, though not completely eliminated, by verifying a sample of each coder's work and taking corrective action where necessary.

After the coding and certain other manual processing steps are complete, the information on the questionnaires is key-entered onto a computer file. Two procedures are used to control the number of data capture errors. First, certain edits (such as range checks) are performed as the data are keyed. Secondly, a sample from each batch of documents is re-keyed and compared with the original entries. If there is more than a specified number of errors among the original entries, the whole batch is re-keyed.

Once the data have been captured, they are sent to Ottawa where they undergo a series of computer checks to identify missing or inconsistent responses. In the case of inconsistent responses, it has first to be decided which response is to be considered invalid. Invalid or missing responses must then be replaced by valid responses, that is, responses which are consistent with other data on the record. For a small proportion of cases, the correct response can be inferred from other data on the record. In most cases, however, this is not possible and a valid response is obtained from a "donor" record selected at random from among a group of consistent records which are similar to the invalid record in terms of a number of related characteristics. There is, of course, no guarantee that the imputed value will necessarily be the correct response for the individual concerned. However, provided the missing or invalid records are similar, on average, to the valid records, any imputation errors will more or less cancel out when results are tabulated for a sufficiently large geographical area or subgroup of the population.

À certaines questions du recensement, il faut inscrire une réponse en toutes lettres. Pendant le dépouillement au bureau régional, on attribue un code numérique à ces réponses "écrites". Il peut alors se produire des erreurs de codage, surtout lorsque la liste des codes est longue (comme dans le cas de la langue, de l'origine ethnique, de l'industrie et de la profession) ou lorsque la réponse écrite est ambiguë, incomplète ou difficile à lire. En vérifiant un échantillon du travail de chaque préposé au codage et en prenant des mesures correctives s'il y a lieu, on peut contrôler les erreurs de codage, sans toutefois les éliminer complètement.

Après le codage et certaines autres étapes du dépouillement manuel des données, les renseignements figurant sur les questionnaires sont introduits sur clavier dans un fichier d'ordinateur. Deux procédures servent à contrôler le nombre d'erreurs à la saisie des données. Premièrement, certaines vérifications (comme le contrôle des tranches) sont effectuées au moment de l'introduction des données. Deuxièmement, un échantillon de chaque lot de documents est réintroduit et comparé à la série de données originale. Si le nombre d'erreurs dans la série originale est supérieur à un nombre déterminé, tout le lot doit être réintroduit.

Une fois que les données sont saisies, elles sont envoyées à Ottawa, où elles font l'objet d'une série de contrôles informatiques permettant de découvrir des réponses manquantes ou incohérentes. Dans le cas des réponses incohérentes, il faut d'abord décider quelle réponse doit être considérée non valide. Les réponses non valides ou manquantes doivent ensuite être remplacées par de bonnes réponses, c'est-à-dire par des réponses compatibles avec les autres données figurant sur l'enregistrement. Dans une faible proportion de cas, la bonne réponse peut être déduite à partir des autres données de l'enregistrement. Toutefois, dans la plupart des cas, cela est impossible, et la bonne réponse est tirée d'un enregistrement "donneur" choisi au hasard parmi un groupe d'enregistrements cohérents où un certain nombre de caractéristiques connexes sont similaires à celles de l'enregistrement incomplet. On ne peut bien sûr garantir que la valeur imputée sera nécessairement la bonne réponse pour la personne concernée. Néanmoins, si les enregistrements contenant des données non valides ou manquantes sont, en moyenne, similaires aux enregistrements valides, les erreurs à l'imputation sont plus ou moins éliminées lorsque les résultats sont totalisés pour une région géographique ou un sous-groupe de la population suffisamment important.

Various studies are being carried out to evaluate the quality of the responses obtained in the 1986 Census. For each question, response rates and edit failure rates have been calculated. These can be useful in identifying the potential for non-response and other errors. Also, tabulations from the 1986 Census have been or will be compared with corresponding estimates from previous censuses, from sample surveys (such as the Labour Force Survey) and from various administrative records (such as birth registrations and municipal assessment records). Such comparisons can indicate potential quality problems or at least discrepancies between the sources.

In addition to these aggregate-level comparisons, there are some micromatch studies in progress, in which census responses are compared with another source of information at the individual record level. For certain "stable" characteristics (such as age, sex, mother tongue, place of birth, etc.), the responses obtained in the 1986 Census, for a sample of individuals, are being compared with those for the same individuals in the 1981 Census. Also, following the 1986 Census, a sample of persons was re-enumerated, primarily to determine overcoverage rates. At the same time, however, interviewers asked a series of detailed questions on language, ethnic origin and structural type of dwelling, the responses to which will be compared with the corresponding census responses in order to identify, and hopefully understand, response errors.

## SAMPLING ERRORS

Estimates obtained by weighting up responses collected on a sample basis are subject to error due to the fact that the distribution of characteristics within the sample will not usually be identical to the distribution of characteristics within the population from which the sample has been selected.

On mène actuellement diverses études pour évaluer la qualité des réponses obtenues dans le cadre du recensement de 1986. Pour chaque question, on a calculé des taux de réponse et des taux de rejet à la vérification. Ces taux peuvent servir à déterminer la présence possible d'erreurs dues à la non-réponse et d'autres erreurs. De plus, les totalisations du recensement de 1986 ont été, ou seront, comparées à des estimations correspondantes établies à partir de recensements antérieurs, d'enquêtes-échantillon (comme l'Enquête sur la population active) et de divers dossiers administratifs (comme les extraits de naissances et les rapports d'évaluation municipale). Ces comparaisons peuvent indiquer certains problèmes potentiels au niveau de la qualité ou du moins certaines incohérences entre les sources d'information.

En plus de ces comparaisons globales, on étudie actuellement les données de certains particuliers en comparant les réponses du recensement à une autre source de renseignements. Pour certaines caractéristiques "stables" (comme l'âge, le sexe, la langue maternelle, le lieu de naissance, etc.), les réponses obtenues au recensement de 1986 sont comparées aux renseignements fournis pour les mêmes personnes au recensement de 1981. De plus, après le recensement de 1986, on a dénombré une seconde fois un échantillon de répondants, surtout pour déterminer les taux de sur-dénombrement. En même temps, les interviewers ont posé une série de questions détaillées sur la langue, l'origine ethnique et le type de construction résidentielle, et les réponses seront comparées aux réponses fournies au recensement, ce qui nous permettra de déterminer les erreurs de réponse et, nous l'espérons, de les comprendre.

## ERREURS D'ÉCHANTILLONNAGE

Les estimations qui sont obtenues par la pondération des réponses recueillies auprès d'un échantillon sont sujettes à une erreur vu que la répartition des caractéristiques au sein de l'échantillon n'est habituellement pas identique à la répartition des caractéristiques au sein de la population à partir de laquelle l'échantillon a été prélevé.

The potential error introduced by sampling will vary according to the relative scarcity of the characteristics in the population. For large cell values the potential error due to sampling, as a proportion of the cell value, will be relatively small. For small cell values this potential error, as a proportion of the cell value, will be relatively large.

The potential error due to sampling is usually expressed in terms of the so called "standard error". This is the square root of the average, taken over all possible samples of the same size and design, of the squared deviation of the sample estimate from the value for the total population.

The table below provides approximate measures of the standard error due to sampling. These measures are intended as a general guide only.

Users wishing to determine the approximate error due to sampling for any given cell of data, based upon the 20% sample, should choose the standard error value in the column of the standard error table whose heading is closest to the value of the given cell in the census tabulation. When using the obtained standard error value, in general the user can be reasonably certain that, for the enumerated population, the true value (discounting all forms of error other than sampling) lies within plus or minus three times the standard error (e.g., for a cell value of 1,000 the range would be 1,000 + or - 3X65 or 1,000 + or - 195).

The standard errors given in the table below will not apply to population or universe (persons, households, dwellings or families) totals or subtotals for the geographic area under consideration (see Sampling and Weighting). The effect of sampling for these cells can be determined by comparison with a corresponding 100% publication.

The effect of the particular sample design and weighting procedure used in the 1986 Census will vary, however, from one characteristic to another and from one geographic area to another. The standard error values in the table below may, therefore, understate or overstate the error due to sampling.

L'erreur possible introduite par l'échantillonnage variera en fonction de la rareté relative de la caractéristique au sein de la population. Lorsqu'il y a des cases comportant des chiffres assez grands, l'erreur possible attribuable à l'échantillonnage, en proportion de la valeur de la case, sera relativement petite. Si les valeurs des cases sont petites, cette erreur, en proportion de la valeur de la case, sera toutefois relativement importante.

L'erreur possible due à l'échantillonnage est généralement exprimée en termes d'"erreur type". Ceci est la racine carrée de la moyenne, tirée de tous les échantillons possibles de même taille et du même plan, de l'écart quadratique de l'estimation de l'échantillonnage à la valeur pour la population totale.

Le tableau à la page suivante présente une évaluation approximative de l'erreur type provenant de l'échantillonnage. Cette évaluation ne devrait servir que de guide.

Les utilisateurs qui désirent connaître l'erreur approximative provenant de l'échantillonnage pour une case de données en particulier, d'après l'échantillon de 20%, n'ont qu'à choisir la valeur de l'erreur type dans la colonne du tableau des erreurs types dont la rubrique est le plus près de la valeur de la case dans la totalisation du recensement. Lorsqu'il utilise la valeur obtenue de l'erreur type, l'utilisateur peut en général être raisonnablement certain que la valeur réelle de la population recensée (si l'on ne tient compte d'aucune forme d'erreur autre que l'échantillonnage) se situera à plus ou moins trois fois l'erreur type (par exemple, pour une case dont la valeur est 1,000, l'écart s'étendra de 1,000 + ou - 3X65 ou 1,000 + ou - 195).

Les erreurs types données dans le tableau ci-dessous ne s'appliqueront pas aux totaux ou totaux partiels de la population ou de l'univers (personnes, ménages, logements ou familles) de la région géographique à l'étude (voir Échantillonnage et pondération). On peut connaître l'effet de l'échantillonnage sur ces cases en consultant la publication correspondante qui présente les données intégrales.

Les répercussions du plan d'échantillonnage et de la procédure de pondération utilisés au recensement de 1986 varieront cependant d'une caractéristique à une autre et d'une région géographique à l'autre. Les valeurs de l'erreur type dans le tableau ci-dessous pourront toutefois surestimer ou sous-estimer l'erreur provenant de l'échantillonnage.

For further information on the quality of census data, contact Social Survey Methods Division at Statistics Canada, Ottawa, Canada K1A 0T6 (613) 951-6929.

Pour de plus amples renseignements sur la qualité des données du recensement, veuillez communiquer avec la Division des méthodes d'enquêtes sociales de Statistique Canada, Ottawa, Canada K1A 0T6 (613) 951-6929.

## CONFIDENTIALITY AND RANDOM ROUNDING

The figures shown in this report have been subjected to a confidentiality procedure known as "random rounding" to prevent the possibility of associating small figures with any identifiable individual. Under this method, all figures including totals are randomly rounded (either up or down) to a multiple of "5". This technique provides strong protection against direct, residual or negative disclosures without adding significant error to the census data. However, since totals are independently rounded, they do not necessarily equal the sum of individual rounded figures in distributions. Also, minor differences can be expected for corresponding totals and cell values in various census tabulations. Similarly, percentages, which are calculated on rounded figures, do not necessarily add to 100. Percentage distributions and rates for the most part are based on rounded data, while percentage changes and averages are based on unrounded data.

Of concern to some users is that small cell counts may suffer a significant distortion as a result of random rounding. This distortion is the protection against disclosure and individual data cells containing these small numbers may lose their precision as a result. Since the rounding is of a random nature, however, when data cells are re-

## CONFIDENTIALITÉ ET ARRONDISSEMENT ALÉATOIRE

Par souci de confidentialité, les chiffres publiés dans le présent rapport ont subi un "arrondissement aléatoire" qui supprime toute possibilité d'associer des chiffres à une personne facilement reconnaissable. Grâce à cette méthode, tous les chiffres, y compris les totaux, sont arrondis de façon aléatoire (vers le haut ou vers le bas) jusqu'à un multiple de "5". Cette technique assure une protection efficace contre la divulgation directe, par soustraction ou par méthode résiduelle, sans ajouter d'erreur significative aux données du recensement. Cependant, comme les totaux sont arrondis séparément, ils ne correspondent pas nécessairement à la somme des chiffres arrondis dans les répartitions. De plus, il faut s'attendre à ce que les totaux et les autres chiffres correspondants dans diverses totalisations du recensement présentent quelques légères différences. De même, la somme des pourcentages calculés à partir de chiffres arrondis ne correspond pas forcément à 100. Les répartitions en pourcentage et les taux sont dans la plupart des cas basés sur des données arrondies, alors que les variations en pourcentage et les moyennes sont basées sur des données non arrondies.

La distorsion importante pouvant résulter de l'arrondissement aléatoire lorsqu'il s'agit de cases de faible valeur préoccupe certains utilisateurs. Cette distorsion, qui assure la protection contre la divulgation, entraîne une perte de précision des cases de données renfermant des chiffres peu élevés. Cependant, comme il s'agit d'une méthode

**Table: Approximate Standard Error Due to Sampling for 1986 Census Sample Data**

**Tableau: Erreur type approximative provenant de l'échantillonnage des données-échantillon du recensement de 1986**

| Approximate<br>Standard<br>Error     | Cell Value<br>Valeur des cases |     |     |     |       |       |       |        |        |        |         |         |
|--------------------------------------|--------------------------------|-----|-----|-----|-------|-------|-------|--------|--------|--------|---------|---------|
|                                      | 50                             | 100 | 200 | 500 | 1,000 | 2,000 | 5,000 | 10,000 | 20,000 | 50,000 | 100,000 | 500,000 |
| Erreur<br>type<br>approxi-<br>mative | 15                             | 20  | 30  | 45  | 65    | 90    | 140   | 200    | 280    | 435    | 600     | 1,300   |

aggregated by the user, the rounding errors tend to cancel out. Distortions may be further reduced by building in the appropriate subtotals into tabulations. Also available is the option of requesting custom tabulations from the census microdata bases. With custom products, random rounding occurs after data cells have been aggregated thus minimizing any distortion.

In addition to random rounding, procedures such as **area** and **cell suppression** have been adopted to further protect the confidentiality of individual responses.

With **area suppression**, all characteristic data for the geographic area are deleted and replaced with the symbol (XXX). The extent to which data are suppressed depends upon whether the area is a standard geographic area, i.e. aggregated from enumeration areas (federal electoral districts, census divisions, census subdivisions, census tracts, etc.) or a non-standard area specified by the user for a custom tabulation. Data are deleted if the population is less than 40 persons for standard areas and less than 100 persons for non-standard areas. For tables involving income distributions, the suppression of data is extended to geographic areas with a total population of less than 250. Suppressed data are, however, included in the appropriate higher aggregate subtotals and totals. This technique is being implemented for all products involving subprovincial data (i.e. Profile series, basic summary data products, semi-custom and custom data products) collected on a 100% or 20% sample basis.

Note: For data collected on a 20% sample basis, area suppression is based on the non-institutional population rather than the total population since sample data were not collected for the institutional population.

aléatoire, les erreurs dues à l'arrondissement ont tendance à disparaître lorsque les cases de données sont agrégées de nouveau. Il est aussi possible de réduire les distorsions en intégrant des totaux partiels dans les totalisations. On peut aussi choisir de demander des totalisations spéciales établies à partir des bases de microdonnées du recensement. Dans le cas de produits personnalisés, l'arrondissement aléatoire se fait après que les cases de données ont été agrégées, ce qui réduit la distorsion au minimum.

Outre l'arrondissement aléatoire, on a adopté d'autres techniques, telles que la **suppression des régions et des cases**, afin d'assurer encore mieux la confidentialité des réponses.

Dans le cadre de la **suppression des régions**, toutes les données caractéristiques se rapportant à la région géographique sont supprimées et remplacées par le symbole (XXX). La suppression des données se fait différemment selon qu'il s'agit d'une région normalisée, c.-à-d. regroupant des secteurs de dénombrement (une circonscription électorale fédérale, une division de recensement, une subdivision de recensement, un secteur de recensement, etc.) ou d'une région non normalisée pour laquelle l'utilisateur désire une totalisation spéciale. Les données sont supprimées si la population est inférieure à 40 personnes dans le cas des régions normalisées, et à 100 personnes lorsqu'il s'agit de régions non normalisées. Pour les tableaux renfermant des répartitions des revenus, on supprime aussi les données relatives aux régions dont la population est inférieure à 250 personnes. Toutefois, les données supprimées sont incluses dans les totaux, partiels ou non, à un niveau d'agrégation supérieur. Cette technique est appliquée à tous les produits renfermant des données infraprovinciales (c.-à-d. la série des Profils, les produits sommaires de base, les produits personnalisés et semi-personnalisés), qu'il s'agisse de données intégrales ou de données recueillies sur un échantillon de 20%.

Nota: Pour les données-échantillon, la suppression des régions est fondée sur la population hors institution plutôt que sur la population totale, étant donné qu'aucune donnée-échantillon n'a été recueillie pour la population des institutions.

With **cell suppression**, the minimum acceptable value for a cell is specified. All cell values below the designated cut-off are deleted and replaced by the symbol (XXX). However, the suppressed data are included in the appropriate higher aggregate subtotals and totals. For 1986 data products, two different methods of cell suppression are being implemented. For publications in "The Nation" and "Dimensions" series involving income, detailed occupation or detailed industry, the distribution is being suppressed where less than 250 persons or units are involved. In semi-custom and custom tabulations of variables collected on a sample basis, all cells with a value of "5" (after random rounding) are being suppressed.

Dans le cas de la **suppression des cases**, il faut préciser une valeur minimale acceptable. Toutes les cases dont la valeur est inférieure au seuil établi sont supprimées et remplacées par le symbole (XXX). Les données supprimées sont toutefois incluses dans les totaux, partiels ou non, à un niveau d'agrégation supérieur. Pour les données de 1986, on a mis en oeuvre deux méthodes différentes de suppression des cases. Dans le cas des publications de la série "Le Pays" et de la série "Dimensions" portant sur le revenu, la profession précise ou l'industrie précise, on supprime la répartition lorsqu'il s'agit de moins de 250 personnes ou unités. Dans le cas de totalisations personnalisées ou semi-personnalisées se rapportant à des variables recueillies à partir d'un échantillon, toutes les cases dont la valeur est de "5" (après arrondissement aléatoire) sont supprimées.

## SPECIAL NOTES

### ADJUSTMENTS TO GEOSTATISTICAL AREAS

Users should be aware that census geostatistical areas are subject to change from one census to the next. Therefore, when using data from two or more censuses, the user must be aware of, and take into consideration, any changes to the geographic limits of the areas being compared. Users wishing to obtain additional information in this regard should refer to the documents previously mentioned under "Reference Products" or contact Geography Information Services, Statistics Canada.

## NOTES SPÉCIALES

### AJUSTEMENTS AUX UNITÉS GÉOSTATISTIQUES

Les utilisateurs doivent être conscients du fait que les unités géostatistiques du recensement peuvent varier d'un recensement à l'autre. Par conséquent, celui qui utilise des données provenant de deux ou plusieurs recensement doit être au courant et tenir compte du fait que les limites géographiques des secteurs qu'il compare peuvent avoir été modifiées. Les utilisateurs qui désirent obtenir d'autres renseignements à ce sujet doivent se référer aux documents déjà mentionnés sous la rubrique "Produits de référence" ou s'adresser aux Services d'information de la géographie, Statistique Canada.

## GEOGRAPHIC REFERENCE DATE

All data reported for census subdivisions are based on the boundaries in effect on January 1, 1986 provided that the information and documentation regarding these boundaries were in the hands of Statistics Canada by March 1, 1986. Where information was not received or was received after March 1, 1986, the name, status and/or limits of census subdivisions may not correspond to those recognized by provincial authorities.

## DATE DE RÉFÉRENCE DES RÉGIONS GÉOGRAPHIQUES

Toutes les données déclarées pour les subdivisions de recensement sont fondées sur les limites qui existaient au 1<sup>er</sup> janvier 1986, à condition que Statistique Canada ait en main les renseignements et les documents concernant ces limites le 1<sup>er</sup> mars 1986 au plus tard. Dans les cas où les renseignements n'ont pas été reçus ou ont été reçus après le 1<sup>er</sup> mars 1986, le nom, le statut et (ou) les limites des subdivisions de recensement risquent de ne pas correspondre à ceux reconnus par les autorités provinciales.

## **POPULATION COUNTS BASED ON USUAL RESIDENCE**

The population counts shown here for a particular area represent the number of Canadians whose usual place of residence is in that area, regardless of where they happened to be on Census Day. Also included are any Canadians staying in a dwelling in that area on Census Day and having no usual place of residence elsewhere in Canada. In most areas, there is little difference between the number of usual residents and the number of people staying in the area on Census Day. For certain places, however, such as tourist or vacation areas, or those including large work camps, the number of people staying in the area at any particular time could significantly exceed the number of usual residents shown here.

## **INCOMPLETELY ENUMERATED INDIAN RESERVES AND INDIAN SETTLEMENTS**

On some Indian reserves and Indian settlements in the 1986 Census, enumeration was not permitted or was interrupted before it could be completed.

Data for 1986 are therefore not available for the incompletely enumerated reserves and settlements and are not included in tabulations. Data for geographic areas containing one or more of these reserves or settlements are therefore footnoted accordingly. Because of the missing data, users are cautioned that for affected geographic areas, comparisons (e.g., percentage change) between 1981 and 1986 are not exact. While for higher level geographic areas (Canada, provinces, census metropolitan areas and census agglomerations) the impact of the missing data is very small, the impact can increase for smaller areas containing a larger proportion of affected reserves and settlements.

While it is not possible to estimate the population of each incompletely enumerated reserve, estimates of the missed total population and total occupied dwellings at the provincial level have been made and are shown in Appendix 1.

## **CHIFFRES DE POPULATION BASÉS SUR LA RÉSIDENCE HABITUELLE**

Les chiffres de population présentés ici pour les différentes régions géographiques indiquent le nombre de Canadiens qui y ont leur lieu habituel de résidence, sans égard au lieu où ils se trouvaient le jour du recensement. Sont également comptés les Canadiens séjournant dans un logement de la région en cause le jour du recensement et n'ayant pas de lieu habituel de résidence ailleurs au Canada. Dans la plupart des régions, il n'y a guère de différence entre le nombre de résidents habituels et le nombre de personnes séjournant dans la région le jour du recensement. Toutefois, dans certains endroits, comme les lieux de villégiature et les régions où sont situés des camps de chantier importants, la différence entre ces deux chiffres peut être importante.

## **RÉSERVES INDIENNES ET ÉTABLISSE- MENTS INDIENS PARTIELLEMENT DÉNOMBRÉS**

Lors du recensement de 1986, le dénombrement n'a pas été autorisé sur certaines réserves indiennes et établissements indiens ou a dû être interrompu parce qu'on ne pouvait le mener à terme.

Les données de 1986 ne sont donc pas disponibles pour les réserves indiennes et les établissements indiens partiellement dénombrés et ne sont pas comprises dans les totalisations. Les données sur les régions géographiques ayant une ou plusieurs de ces réserves ou établissements font donc l'objet d'un renvoi approprié. En raison des données manquantes, les utilisateurs doivent prendre note que les comparaisons (par ex., des variations en pourcentage) entre 1981 et 1986 ne sont pas exactes pour les régions géographiques en cause. L'effet des données manquantes est très faible pour les régions géographiques de niveau plus élevé (Canada, provinces, régions métropolitaines de recensement et agglomérations de recensement) mais peut être plus important pour les petites régions où les réserves et établissements indiens en cause représentent une proportion plus grande de la population.

Bien qu'il soit impossible d'estimer la population de chaque réserve partiellement dénombrée, les estimations de la population totale manquante et du nombre total de logements privés occupés au niveau provincial ont été faites et sont présentées à l'annexe 1.

Note, however, that it was not possible to estimate any characteristics of the missed population, even at the provincial level.

Additional information on this subject can be obtained by referring to the User Information Bulletin, Number 1, "Summary of the Methodology for Estimating the Population and Occupied Private Dwellings on Incompletely Enumerated Indian Reserves".

A list of incompletely enumerated Indian reserves and Indian settlements is shown in Appendix 2 together with the province, census division and, where applicable, the census metropolitan area or census agglomeration (CMA/CA) in which each is located.

Veillez noter par contre qu'il a été impossible d'estimer les caractéristiques de la population manquante, même au niveau provincial.

Pour de plus amples renseignements sur ce sujet, reportez-vous au Bulletin d'information à l'intention des utilisateurs, numéro 1, "Sommaire de la méthode utilisée pour l'estimation de la population et du nombre de logements privés occupés dans les réserves indiennes où le dénombrement a été incomplet".

Une liste des réserves indiennes et des établissements indiens partiellement dénombrés figure à l'annexe 2. On a indiqué pour chacune la province, la division de recensement et, le cas échéant, la région métropolitaine de recensement ou l'agglomération de recensement (RMR/AR).

## ACCESSIBLE FROM COAST TO COAST

Statistics Canada's regional reference centres provide a full range of the census products and services. Each reference centre is equipped with a library and a sales counter where users can consult or purchase census publications, microcomputer diskettes, microfiche, maps and more. Each centre has facilities to retrieve information from Statistics Canada's computerized data retrieval systems - CANSIM and TELICHART. A telephone inquiry service is also available with toll-free numbers for regional clients outside local calling areas. Many other services - from seminars to consultations - are offered. Call or write your regional reference centre for information.

### NEWFOUNDLAND AND LABRADOR

## OÙ NOUS TROUVER?

Les centres régionaux de consultation de Statistique Canada offrent la gamme complète des produits et services du recensement. On y trouve une bibliothèque et un comptoir de vente où les utilisateurs peuvent consulter ou acheter des publications du recensement, des disquettes de micro-ordinateurs, des microfiches, des cartes et plus encore. Chaque centre vous offre la possibilité d'extraire de l'information des systèmes de retrait de données automatisées CANSIM et TELICHART de Statistique Canada. Un service de renseignements téléphonique est également disponible; ce service est gratuit pour les clients se trouvant à l'extérieur des services d'appel locaux. On y offre également plusieurs autres services utiles, allant des séminaires aux consultations. Pour obtenir des renseignements, téléphonez ou écrivez au centre de consultation de votre région.
